

# SM802149

156.25MHz/312.5MHz and  
78.125MHz/156.25MHz  
LVDS Clock Synthesizer

ClockWorks™ Flex

## General Description

The SM802149 is a member of the ClockWorks™ family of devices from Micrel and provides an extremely low-noise timing solution. It is based on a unique patented ClockWorks Flex architecture that provides very low phase noise.

The device operates from a 3.3V or 2.5V power supply and synthesizes eight differential LVDS clocks, four at 156.25MHz and four at 3125MHz, or four at 78.125MHz and four at 156.25MHz.

The SM802149 accepts a 26.04166MHz crystal or external LVCMOS input.

Datasheets and support documentation are available on Micrel's web site at: [www.micrel.com](http://www.micrel.com).

## Features

- Generates eight differential LVDS clocks: either four at 156.25MHz and four at 312.5MHz, or four at 78.125MHz and four at 156.25MHz
- 2.5V or 3.3V operating range
- Typical phase jitter (1.875MHz to 20MHz): 99fs
- Industrial temperature range
- Green, RoHS, and PFOS compliant
- Available in 44-pin 7mm × 7mm QFN package

## Typical Application

**Notes:**

- Permanent device damage may occur if absolute maximum ratings are exceeded. This is a stress rating only and functional operation is not implied at conditions other than those detailed in the operational sections of this datasheet. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.
- The datasheet limits are not guaranteed if the device is operated beyond the operating ratings.
- Package thermal resistance assumes exposed pad is soldered (or equivalent) to the device's most negative potential on the PCB.
- The circuit is designed to meet the AC and DC specifications shown in the above tables after thermal equilibrium has been established.

### Notes:

- All phase noise measurements were taken with an Agilent 5052B phase noise system.
- Defined as skew between outputs at the same supply voltage and with equal load conditions; Measured at the output differential crossing points.
- Measured using a 26.04166 MHz crystal as the input reference source. If using an external reference input, use a low phase noise source. With an external reference, the phase noise will follow the input source phase noise up to about 1MHz.

## Application Information

### Input Reference

When operating with a crystal input reference, do not apply a switching signal to REF\_IN.

### Crystal Layout

Keep the layers under the crystal as open as possible and do not place switching signals or noisy supplies under the crystal.

Crystal load capacitance is built inside the die so no external capacitance is needed. See the *Selecting a Quartz Crystal for the Clockworks Flex I Family of Precision Synthesizers* application note for further details.

Contact Micrel's HBW applications group if you need assistance to select a suitable crystal for your application at [hbwhelp@micrel.com](mailto:hbwhelp@micrel.com)

### LVDS Outputs

Terminate LVDS outputs with 100Ω across Q and /Q. For best performance, load all outputs. Outputs can be DC or AC-coupled.
