## GPS LNA-Filter Front-End Module

### Data Sheet

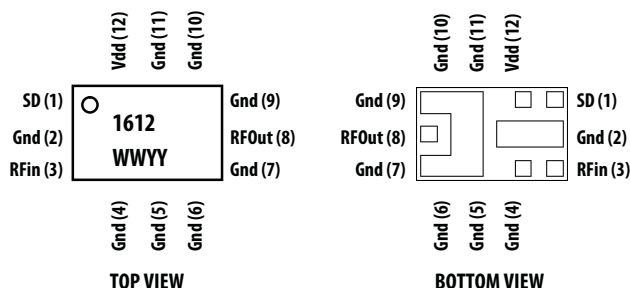

#### Description

Avago Technologies' ALM-1612 is a GPS front-end module that combines a low-noise amplifier (LNA) with a GPS FBAR filter. The LNA uses Avago Technologies' proprietary GaAs Enhancement-mode pHEMT process to achieve high gain with very low noise figure and high linearity. Noise figure distribution is very tightly controlled. A CMOS-compatible shutdown pin is included either for turning the LNA on/off, or for current adjustment. The integrated filter utilizes an Avago Technologies' leading-edge FBAR filter for exceptional rejection at Cell/PCS-Band frequencies.

The low noise figure and high gain, coupled with low current consumption make it suitable for use in critical low-power GPS applications or during low-battery situations.

**Notes**

- L3 and the module's internal input pre-match form the input matching network. The RFin pin, pin 3, is directly connected to a shunt inductor that is grounded. The RF output filter blocks DC. Best noise performance is obtained using high-Q wirewound inductors. This circuit demonstrates that low noise figures are obtainable with standard 0402 chip inductors. Replacing L2 and L3 with high-Q wirewound inductors (eg. Coilcraft 0402CS series) will yield lower NF and higher Gain.
- C2 and L2 form a matching network at the output of the LNA, which can be tuned to optimize gain, output return loss and linearity. For example, higher gain can be obtained by increasing the value of C2 but at the expense of stability.
- L1 and R1 isolates the demoboard from external disturbances during measurement. It is not needed in actual application. Likewise, C1 and C3 mitigate the effect of external noise pickup on the Vdd and SD lines respectively. These components are not required in actual operation.
- The output of the module is internally ac-coupled to pin 8.
- Bias control is achieved by either varying the SD voltage with/ without R2, or fixing the SD voltage to Vdd and adjusting R2 for the desired current.  $R2 = 3.9 \text{ k}\Omega$  will result in 6mA when  $V_{dd}=V_{sd} = 2.7V$  and 4mA when  $V_{dd} = V_{sd} = 1.8V$ .

**ALM-1612 Typical Noise Parameters**

25°C, Freq = 1.575 GHz, Vdd = 2.7V, Idd = 6mA

Freq (GHz)	Fmin (dB)	GAMMA OPT		
		Mag	Ang	Rn/50
1.575	0.77	0.58	31	0.38

**ALM-1612 Typical Noise Parameters**

25°C, Freq = 1.575 GHz, Vdd = 1.8V, Idd = 4mA

Freq (GHz)	Fmin (dB)	GAMMA OPT		
		Mag	Ang	Rn/50
1.575	1.05	0.63	30	0.54

Note:

The exceptional noise figure performance of the ALM-1612 is due to its highly optimized design. In this regard, the Fmin of the ALM-1612 shown above is locked down by the internal input pre-match. This allows the use of relatively inexpensive chip inductors for external matching.
