Tektronix' proven expertise in probes brings you the highest fidelity in high-speed differential probing. The P7350, P7330, and P6330 high-bandwidth differential probes offer excellent signal fidelity, meeting the needs of engineers in design and debug of technologies with very fast clock speeds and edge rates. They provide high-bandwidth, low circuit loading, low-noise differential probing solutions for high-speed circuit designers.

P7350

The P7350 improves usability with variable spacing and solder-down capability, and a small form factor for ease of use on densely packed circuit boards with difficult-to-reach probe points. It employs the patented TekConnect® interface, which preserves signal integrity to 10 GHz and beyond to meet present and future bandwidth needs.

P7330 and P6330

The P7330 and P6330 enable users to make time-domain or frequency-domain measurements on high-bandwidth signals commonly found in digital IC designs, communication applications, and disk drive applications. The P7330 and P6330 provide high-bandwidth, low circuit loading, and low-noise differential probing solutions. The small probe head geometry and assorted probe tip accessories allow these probes to easily accommodate manual probing of surface-mount devices.
