5 Minute[®] Epoxy

ORDERING INFORMATION

Stock No.	Package Size
14251	25ml Dev-tube
14210	70g Twin-tube
14201	500g Tub
14270	50ml Cartridge
14272	400ml Cartridge
14201 14270	500g Tub 50ml Cartridge

Description

A rapid-curing, general-purpose adhesive / encapsulant. It forms a hard, rigid bond or coating in minutes

Features

- 100% reactive, no solvents
- Good dielectric strength
- Good solvent resistance

Intended Use

- Cures fast for quick metal to metal bonding and repairs
- Pots and encapsulates electronic components and assemblies
- Suitable for bonding metals, fabrics, ceramics, glass, wood and concrete (in combinations)

PRODUCT DATA

Physical Properties (Uncured)	Colour Mixed Viscosity Mixed Ratio by Volume of Working time 28 grams of Fixture time Functional cure @ 23°C Full Cure Mixed Density	@ 23°C	Light Amber 10,000cps 1:1 3 - 6 minutes 10-15 minutes 45 - 60 minutes 12 hours 1.10 gm/cc	
Performance	7 days cured at 24°C			
characteristics	Adhesive tensile shear ASTM D1002		13 MPa	
(cured)	T Peel Service temperature, dry		4-5 N/10mm	
			-40 - 93°C	
	Tensile Elongation		1%	
	Specific Volume		909 cm ³ /kg	
	% solids by volume		100	
	Cured hardness, ASTM D2240		85D	
	Dielectric strength, ASTI	M D149	19.6 KV/mm	
Chemical	7 days room temperature cure (30 days immersion)			
Resistance			Poor	
	Ammonia	Poor	Corn Oil	Excellent
	Cutting oil	Excellent	Ethanol	Poor
	Petrol (unleaded)	Excellent	Glycols/Antifreeze	Fair

Sodium Hydroxide

5 Minute[®] Epoxy

APPLICATION INFORMATION

Surface Preparation

5 Minute Epoxy works best on clean surfaces. Surfaces should be free of heavy deposits of grease, oil, dirt or other contaminants, or cleaned with industrial cleaning equipment such as vapour phase degreasers or hot aqueous baths. Abrading or roughing the surfaces of metals will increase the microscopic bond area significantly and optimise the bond strength.

Mixing

This product is available in cartridge, non-cartridge and 28g Devtube form.

Cartridge Form: The cartridge should be used with the appropriate manual Applicator Gun and Static Mixer Nozzle. The Static Mixer Nozzle enables the epoxy to be dispensed, metered and directly applied to the surfaces to be bonded.

Please note: Once the product cures in the nozzle it has to be thrown away and a new nozzle used.

Non-Cartridge Form: Proper homogenous mixing of the two epoxy components of resin and hardener are essential for the curing and development of stated strengths. Always mix the two components with clean tools, preferably of a disposable design.

For small amounts use Devcon's 28g Devtube, which comes with it's own plunger to extrude the two components at an equal rate.

Application

Apply mixed epoxy directly to one surface in an even film or as a bead. Assemble with the mating part within the recommended working time. Obtain firm contact between the parts to minimize any gap and ensure good contact of the epoxy with the mating part. A small amount of epoxy should flow out the edges to show there is adequate gap filling. For very large gaps, apply epoxy to both surfaces and spread to cover the entire area, or make a bead pattern, which will allow flow throughout the joint.

Let bonded assemblies stand for the recommended functional cure time before handling. They are capable of withstanding processing forces at this point, but should not be dropped, shock loaded or heavily loaded.

Storage Shelf Life

Devcon Epoxy Adhesives should be stored in a cool, dry place when not used for a long period of time. A shelf life of 3 years from date of manufacture can be expected when stored at room temperature 22°C in their original containers.

Precaution

For complete safety and handling information please refer to the appropriate Materials Safety Data Sheets prior to using this product.

Warranty

Devcon will replace any material found to be defective. Because the storage, handling and application of this material is beyond our control we can accept no liability for the results obtained.
