

**RADIATION HARDENED
LOGIC LEVEL POWER MOSFET
SURFACE MOUNT (LCC-6)**

Product Summary

Part Number	Radiation Level	R _{Ds(on)}	I _D
IRHLUC7970Z4	100K Rads (Si)	1.60Ω	-0.65A
IRHLUC7930Z4	300K Rads (Si)	1.60Ω	-0.65A

International Rectifier's R7™ Logic Level Power MOSFETs provide simple solution to interfacing CMOS and TTL control circuits to power devices in space and other radiation environments. The threshold voltage remains within acceptable operating limits over the full operating temperature and post radiation. This is achieved while maintaining single event gate rupture and single event burnout immunity.

The device is ideal when used to interface directly with most logic gates, linear IC's, micro-controllers, and other device types that operate from a 3.3-5V source. It may also be used to increase the output current of a PWM, voltage comparator or an operational amplifier where the logic level drive signal is available.

IRHLUC7970Z4
60V, DUAL P-CHANNEL
R7 TECHNOLOGY**

Features:

- 5V CMOS and TTL Compatible
- Low R_{Ds(on)}
- Fast Switching
- Single Event Effect (SEE) Hardened
- Low Total Gate Charge
- Simple Drive Requirements
- Ease of Paralleling
- Hermetically Sealed
- Light Weight
- Complimentary N-Channel Available - IRHLUC770Z4

Radiation Characteristics

IRHLUC7970Z4, 2N7627UC

International Rectifier Radiation Hardened MOSFETs are tested to verify their radiation hardness capability. The hardness assurance program at International Rectifier is comprised of two radiation environments. Every manufacturing lot is tested for total ionizing dose (per notes 5 and 6) using the TO-39 package. Both pre- and post-irradiation performance are tested and specified using the same drive circuitry and test conditions in order to provide a direct comparison.
