

ACPF-7624

Wi-Fi Bandpass Filter

Product Brief

Description

The Avago ACPF-7624 is a chip scale bandpass filter designed for use in mobile Wi-Fi Band applications (2402.5 MHz to 2481.5 MHz), which require high attenuation of adjacent spectrum (for example, LTE bands 7, 38, 40, and 41) to meet coexistence requirements.

The ACPF-7624 is designed with Avago Technologies' innovative film bulk acoustic resonator (FBAR) technology, which makes possible ultra-small, high-Q filters at a fraction of their usual size.

The ACPF-7624 also utilizes Avago Technologies' advanced microcap bonded-wafer technology. This chip scale miniaturization process results in a package size of only 0.71 mm × 0.92 mm and maximum height of 0.25 mm, making the ACPF-7624 smaller than a 0402-size SMT component.

The ACPF-7624 is compatible with high volume, lead-free SMT soldering processes and can be direct surface mounted to a PCB or a transfer molded module.
