Power supply decoupling capacitors (100 nF ceramic, 10  $\mu$ F ceramic) should be placed as near as possible to pin 1 of the device (common design practice).

The L/R pin must be connected to Vdd or GND (refer to [Table 5](#)).

## 4 Sensing element

The sensing element shall mean the acoustic sensor consisting of a conductive movable plate and a fixed plate placed in a tiny silicon chip. This sensor transducers the sound pressure into the changes of coupled capacity between those two plates.

Omron Corporation supplies this element for STMicroelectronics.

## 5 Absolute maximum ratings

Stresses above those listed as “absolute maximum ratings” may cause permanent damage to the device. This is a stress rating only and functional operation of the device under these conditions is not implied. Exposure to maximum rating conditions for extended periods may affect device reliability.

**Table 6. Absolute maximum ratings**

Symbol	Ratings	Maximum value	Unit
Vdd	Supply voltage	-0.3 to 6	V
Vin	Input voltage on any control pin	-0.3 to Vdd +0.3	V
T <sub>STG</sub>	Storage temperature range	-40 to +125	°C
ESD	Electrostatic discharge protection	2 (HBM)	kV
	3 discharges at ± 8 kV direct contact to lid when unit is grounded (IEC 61000-4-2) and 3 discharges at ± 2 kV direct contact to I/O pins. (MIL 883E, Method 3015.7)	± 8	kV

 This device is sensitive to mechanical shock, improper handling can cause permanent damage to the part.

 This device is ESD-sensitive, improper handling can cause permanent damage to the part.

## 6 Functionality

### 6.1 L/R channel selection

The L/R digital pad lets the user select the DOUT signal pattern as shown in [Table 7](#). The L/R pin must be connected to Vdd or GND.

**Table 7. L/R channel selection**

L/R	CLK low	CLK high
GND	Data valid	High impedance
Vdd	High impedance	Data valid

## 9 Process recommendations

To ensure a consistent manufacturing process it is strongly advised to comply with following recommendations:

- The recommended pick-up area for the MP34DT01-M package must be defined using the worst case (ie. no device alignment during picking process). This area has been defined considering all the tolerances of the components involved (reel, package, sound inlet). Picker tolerance shall be considered as well.
- To prevent damage to the MEMS membrane or incorrect pick-up and placement, do not pick up the component on the inlet area
- For the package outline please refer to [Figure 10](#). Nozzle shape, size, and placement accuracy are the other key factors to consider when deciding on the coordinates for the picking.
- Device alignment before picking is highly recommended.
- A vacuum force greater than 7 psi must be avoided
- $1 \text{ kPa} = 0.145 \text{ psi (lb/in}^2) = 0.0102 \text{ kgf/cm}^2 = 0.0098 \text{ atm}$
- All the recommended dimensions (device safe pick area) do not include the pick and place equipment tolerances
- According to [Figure 10](#), standard picker tool can be used to handle this device
