

1.8V CMOS 32-BIT BUS TRANSCEIVER WITH 3-STATE OUTPUTS

IDT74AUC32245

FEATURES:

- ESD > 2000V per MIL-STD-883, Method 3015; > 200V using machine model (C = 200pF, R = 0)
- 1.8V Optimized
- 0.8V to 2.7V Operating Range
- Inputs/outputs tolerant up to 3.6V
- Output drivers: $\pm 8\text{mA}$ @ $V_{DD} = 1.8\text{V}$
- Supports hot insertion
- Available in 96-ball LFBGA package

APPLICATIONS:

- High performance, low voltage communications systems
- High performance, low voltage computing systems

DESCRIPTION:

This 32-bit bus transceiver is built using advanced CMOS technology. The AUC32245 is designed specifically for asynchronous communications between data buses. The control function implementation minimizes external timing requirements.

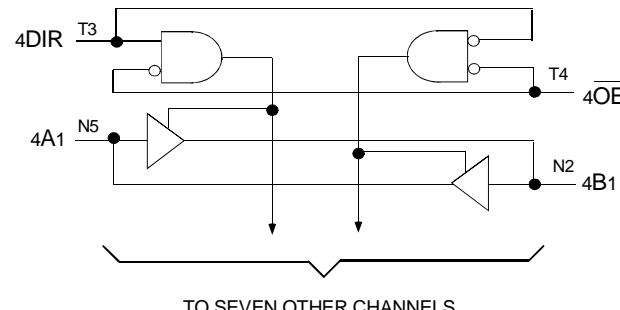

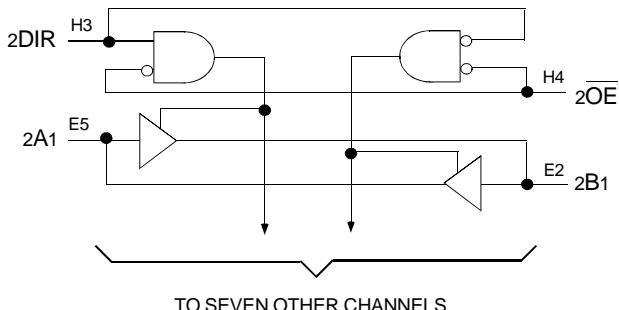

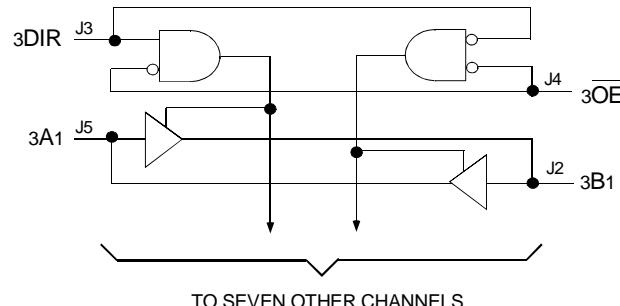

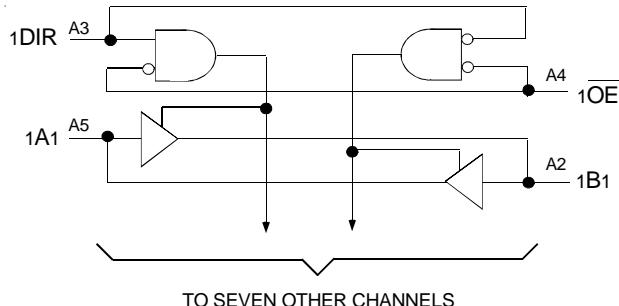

This device can be used as one 32-bit transceiver, two 16-bit transceivers, or four 8-bit transceivers. It allows data transmission from A bus to B bus or from B bus to A bus, depending on the logic level at the direction-control (DIR) input. The output-enable (\overline{OE}) input can be used to disable the device so that the buses are effectively isolated.

This device is fully specified for partial power-down applications using I_{OFF} . The I_{OFF} circuitry disables the outputs, preventing damaging current backflow through the device when it is powered down.

The AUC32245 is designed with a $\pm 9\text{mA}$ output driver. This driver is capable of driving a moderate load while maintaining speed performance.

To ensure the high-impedance state during power up or power down, \overline{OE} should be tied to V_{DD} through a pull-up resistor; the minimum value of the resistor is determined by the current-sinking capability of the driver.

NOTE:

1. Stresses greater than those listed under ABSOLUTE MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.
