### Product Description

The P3P18S19B is a Versatile Spread Spectrum Frequency Modulator designed specifically for input clock frequencies from 20 to 40MHz. (Refer to *Input Frequency and Modulation Rate* Table). The P3P18S19B reduces electromagnetic interference (EMI) at the clock source, allowing system wide reduction of EMI of downstream clock and data dependent signals. The P3P18S19B allows

significant system cost savings by reducing the number of circuit board layers, ferrite beads, shielding, and other passive components that are traditionally required to pass EMI regulations.

The P3P18S19B modulates the output of a single PLL in order to “spread” the bandwidth of a synthesized clock, and more importantly, decreases the peak amplitudes of its harmonics. This results in significantly lower system EMI compared to the typical narrow band signal produced by oscillators and most frequency generators. Lowering EMI by increasing a signal’s bandwidth is called ‘Spread Spectrum Clock Generation’.

The P3P18S19B uses the most efficient and optimized modulation profile approved by the FCC and is implemented in a proprietary all digital method.

### Applications

The P3P18S19B is targeted towards EMI management for memory and LVDS interfaces in mobile graphic chipsets and high-speed digital applications such as PC peripheral devices, consumer electronics, and embedded controller systems.

## Pin Configuration

## Pin Description

Pin#	Pin Name	Type	Description
1	XIN / CLKIN	I	Crystal Connection or external frequency input. This pin has dual functions. It can be connected to either an external crystal or an external reference clock.
2	VSS	P	Ground Connection. Connect to system ground.
3	SRS	I	Spread range select. Digital logic input used to select frequency deviation (Refer to <i>Spread Deviation Selection Table</i> ). This pin has an internal pull-up resistor.
4	ModOUT	O	Spread spectrum clock output. (Refer to <i>Input Frequency and Modulation Rate Table</i> and <i>Spread Deviation Selection Table</i> )
5	REF	O	Non-modulated Reference clock output of the input frequency.
6	PD#	I	Power down control pin. Pull LOW to enable Power-Down mode. This pin has an internal pull-up resistor.
7	VDD	P	Power Supply for the entire chip.
8	XOUT	O	Crystal Connection. Input connection for an external crystal. If using an external reference, this pin must be left unconnected.
