| NOTE | All parameters NOT specially mentioned are measured at 230VAC input, rated load and 25[°]C of ambient temperature. Ripple & noise are measured at 20MHz of bandwidth by using a 12" twisted pair-wire terminated with a 0.1uf & 47uf parallel capacitor. Tolerance: includes set up tolerance, line regulation and load regulation. The power supply is considered a component which will be installed into a final equipment. The final equipment must be re-confirmed that it still meets EMC directives. For guidance on how to perform these EMC tests, please refer to "EMI testing of component power supplies." (as available on http://www.meanwell.com) Mounting holes M1 and M2 should be grounded for EMI purposes. Heat Sink HS1,HS2 can not be shorted. | | | |
