

### Product Description

RFMD's S510065 is a downconverter designed to be used as an Out-of-Band Tuner for use in CATV set-top box and Digital Cable Ready TV applications. The S510065 consists of an input AGC amplifier, mixer, and a video/AGC amplifier. This device offers optimum performance with low power consumption and low distortion. The product is RoHS compliant. The smaller and more cost effective RFFC0085 is the new generation of this product.

#### Optimum Technology Matching® Applied

- GaAs HBT
- GaAs MESFET
- InGaP HBT
- SiGe BiCMOS
- Si BiCMOS
- SiGe HBT
- GaAs pHEMT
- Si CMOS
- Si BJT
- GaN HEMT
- InP HBT
- RF MEMS
- LDMOS

### Features

- 3.3V Single Supply Operation
- Low Power Consumption (400mW)
- Low Distortion: -55dBc at 1V<sub>PP</sub>
- 82dB Total Conversion Gain
- 55dB Total Gain Control Range
- Low LO-RF Leakage

### Applications

- Cable Set-Top Boxes
- Digital Cable Ready TV Sets

Parameter	Specification			Unit	Condition

## Absolute Maximum Ratings

Parameter	Rating	Unit
Supply Voltage ( $V_{DD, GND}$ )	-0.3 to +3.6	V
Operating Temperature ( $T_{OP}$ )	-40 to +85	°C
Storage Temperature ( $T_{STG}$ )	-65 to +150	°C
Junction Temperature	+150	°C
Thermal Resistance ( $\theta_{ja}$ )	34	°C/W

Operation of this device beyond any one of these limits may cause permanent damage. For reliable continuous operation, the device voltage and current must not exceed the maximum operating values specified in the table on page one.

**Caution!** ESD sensitive device.

Exceeding any one or a combination of the Absolute Maximum Rating conditions may cause permanent damage to the device. Extended application of Absolute Maximum Rating conditions to the device may reduce device reliability. Specified typical performance or functional operation of the device under Absolute Maximum Rating conditions is not implied.

## Application Schematic - 1

### RF Amplifier

This amplifier provides a maximum gain of 29 dB. The gain is programmed by applying a DC voltage (from 0V to 3V) to the AGC pin, providing 27 dB of range.

### Downconversion Mixer

This double balanced mixer has 12 dB of conversion gain. The outputs of the mixer are both open drain and require pull-up inductors to  $V_{DD}$ .

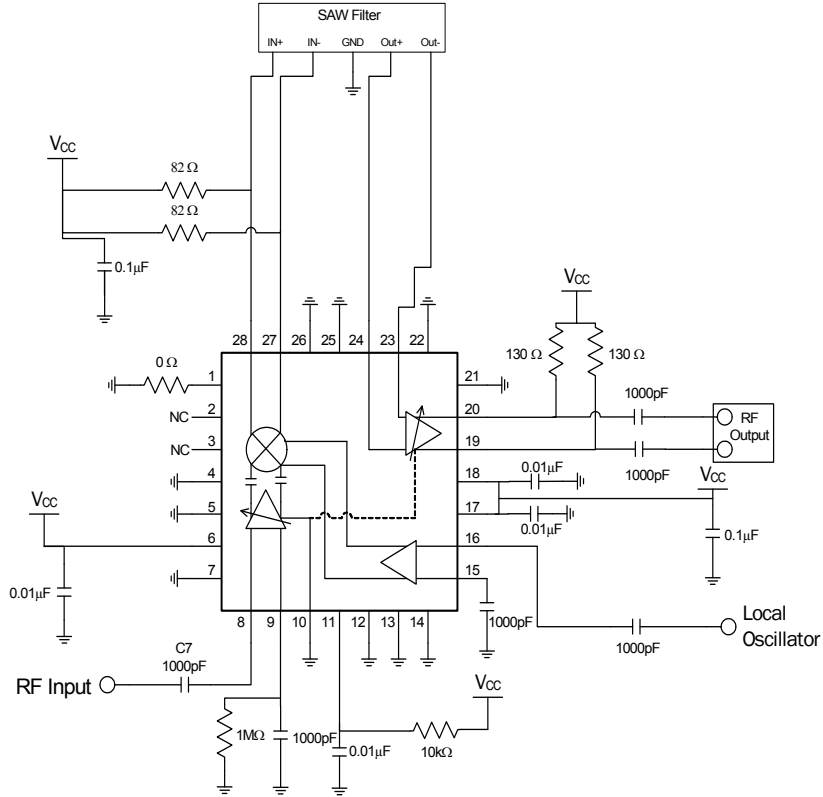

### Video Amplifier

This amplifier provides a maximum gain of 55 dB. The gain is programmed by applying a DC voltage (from 0V to 3V) to the AGC pin, providing 28 dB of range. The outputs of the video amp are both open drain and require pull-up inductors to  $V_{DD}$ .

Note:

1. The RF amplifier and video amplifier are controlled by a single AGC so the overall dynamic range is the sum of the RF amplifier range and the video amplifier range.
