Electronic Components

Cannon 75 Ohm Connectors

Engineered for life

Cannon 75 Ohm Connectors

ITT Electronic Components is a division of the multi-national ITT Corporation a \$7.5 billion dollar global enterprise. Our extensive portfolio offers the most reliable and cost effective range of interconnect solutions. These innovations have enabled ITT to provide products and technologies to such markets as:

- Aerospace
- Broadcast
- Computers Systems
- Defense Electronics
- Geophysical
- Industrial Automation
- Medical Electronics
- Network Systems
- Telecom Switching
- Underwater Systems
- Wireless

Offering the broadest selections of standard and custom RF interconnects, ITT is the one stop source for design, development, manufacturing, and testing of sophisticated connectors.

High Performance 75 Ohm Connectors

This 75 ohm RF catalog incorporates the most commonly used connectors used in today's routing, switching and transmission equipment. These include the popular Type 43 (SMZ), 1.0/2.3, QT-BNC, and 1.6/5.6

connector families. In addition we have included a tooling section to simplify and ease the assembly our our connectors both in the factory and for field installations. ITT is an approved manufacturer to ISO 9001 and ISO 14001 with locations worldwide to serve our customers.

The Custom Difference

ITT's world class engineering teams will work directly with our customers to design and develop cost effective solutions for their applications . In

many cases we may modify one of our standard designs to ensure a highly reliable solution where timing is critical. Yet, in those cases where a complete custom interconnect solution is required, ITT will work with our customer's Engineers to design an interconnect solution which will be cost effective yet highly reliable.

In addition to custom connectors, ITT offers sophisticated custom cable assembly capabilities for a wide range of applications. Our in house expertise translates to our ability to integrate different technologies within a custom cable harness.

Quick Reference Selection Guide

	QT BNC	Type 43 (SMZ)	1.0/2.3, Type 54	1.6/5.6
				
Frequency Range	0 to 2 GHz	0 to 3 GHz	0 to 2 GHz	0 to 1 GHz

New electrical SFP transceiver for STM-1e applications from ITT

Designed to comply with the Small Form Factor Pluggable (SFP) industry-standard multi source agreement (MSA), the new Cannon SFP-155E™ electrical transceiver from ITT delivers full duplex STM-1 electrical (155 Mbit/s) SDH transport over coaxial cables and are fully interchangeable with STM-1 optical SFP's. Any system that already supports STM-1 optical can now support STM-1 electrical by using the SFP-155E. More importantly a single circuit card can now support both optical and electrical STM-1 interfaces, reducing system capital and operating costs. The electrical interface is fully compliant with telecom ITU-T G.703 (ES1) recommendations and can be connected using standard DIN 1.0/2.3 75 ohm cable connectors. The SFP-155E enables systems designers to reduce time-to-market at a lower cost, and with full flexibility. Serial identification (EEPROM) in accordance with the SFP MSA is available. Typical applications include Next Generation SDH Add/Drop multiplexers, Optical Edge Devices, MSPP and Switching Systems.

Contact Customer Service for more information on this product.

Connector/Cable Selection Guide

Given here are details of all popular cables with which the connectors in this publication may be used.

Cable numbers suitable for use with all cable mounting connectors are given opposite the connector part numbers in the series chose.

If the connector style is not shown against your selected cable, please contact Customer Service.

Cable Number	Impedance (ohms)	Diameter of Jacket	Diameter of Outer Conductor (Max)	Diameter of Dielectric (Max)	Diameter of Center Conductor (Nom)
BT2002*	75	5,30 (.209)	3,81 (.150)	2,45 (.096)	0,60 (.024)
BT2003*	75	6,90 (.272)	5,06 (.199)	3,70 (.146)	0,61 (.024)
BT3002*	75	3,55 (.140)	2,85 (.112)	1,95 (.077)	0,31 (.012)

Cannon 75 Ohm Connectors

QT Quick Termination

The QT (Quick Termination) 75 ohm connector series was designed to meet the rigorous specifications of the telephony, broadcast and data communications industry. With only two components to handle, our QT connectors are easier to terminate than the current industry standard products while providing reliable electrical and mechanical performance.

QT connectors were first installed on 140Mbit lines in an international telecommunications exchange over 15 years ago, and since that day ITT have supplied over 30 million QT connectors into many of the world's leading networks.

- QT=** 'Quick Termination' of coaxial connectors
- QT=** 3:1 reduction in assembly time
- QT=** No crimping or soldering of the center contact
- QT=** No special tooling required
- QT=** Simplified assembly
- QT=** Fewer wasted parts
- QT=** Reduced tooling maintenance and calibration
- QT=** Pre-assembled center contact
- QT=** A reliable, high pressure, gas tight joint

Several innovative concepts and technologies are used in our QT designs. The primary technological feature is a captivated center pin that provides a high pressure gas tight joint of exceptional mechanical and electrical integrity on solid center conductors; termination is achieved without crimping or soldering to the cable's center conductor. The cable center conductor is terminated to the inner contact within the connector assembly by activating the QT (patented) mechanism using the simple plastic tool provided. Connectors referenced in this catalog with "QT" have this technology.

The assembly is completed in 4 simple steps:

- STEP 1:** Strip cable
- STEP 2:** Assemble connector onto cable
- STEP 3:** Press insulator into the body using the plastic tool provided
- STEP 4:** Crimp the ferrule using a standard crimp tool

For high volume terminations, some styles can also be assembled using dedicated hand or pneumatic bench tooling.

QT connectors provide large productivity savings, high quality and premium performances... all at a competitive price.

Type 43 (SMZ)

ITT's wide range of Cannon Type 43 / SMZ connectors are extensively used in 75 ohm communication systems and have become the recognized standard in telecommunications in many parts of the world.

Designed around the requirements of BS9210 F0022 and draft specifications CECC 122 300, these connectors are designed for field installation and feature the 'Posi-Lock' latch to prevent accidental disconnection.

A special feature of the Cannon Type 43 / SMZ range is the QT (Quick Termination) technology for cable connectors. Designed to reduce assembly time and loose parts, the QT termination system incorporates a connector body with a pre-assembled center contact, termination is simple with no loose contact to drop or lose. QT provides a reliable gas tight connection between the inner conductor of the cable and connector contact that meets the most stringent industry standards. For PCB connectors a snap fit feature is incorporated into certain styles to hold the connector in position during soldering.

Choice of Two Latching Styles – Standard or HDC (High Density)

ITT's Cannon Type 43 / SMZ connectors are available in 2 package sizes, Standard and HDC (High Density). Whilst both configurations have the same interface dimensions and are intermateable, the outer body size of HDC is reduced to facilitate a closer packing density on the equipment or distribution frame.

Applications

- Switching Equipment • DSX Cross Connects • Base Stations • Routers • Wireless • Telecom • LAN Equipment

Features and Benefits

High performance gold plated contact areas ensure reliable long term operation

Posi-Lock locking mechanisms ensure secure coupling and ease of engagement and separation

Designed for the most commonly used telecom cables in North America and Europe

Designed for robust and reliable field installation

Available for BT standard and HDC distribution frames

Three-part construction with crimp inner contact and outer ferrule (no soldering required)

PCB Plugs come with offset legs for board locking

QT (Quick termination) technology available for most cable types

Product offering includes U-links and between series adaptors

True 75 ohm characteristic impedance up to 3 GHz (for selected styles)

Most designs require no special tooling

"Teplock" mounting reduces the time needed for fitting to DDF's

RoHS compliant part numbers

Cannon 75 Ohm Connectors

Type 43 (SMZ)

Specifications

ELECTRICAL	Impedance	75 Ω nominal
	Frequency Range	0 to 3.0 GHz (some styles limited to 1.0GHz)
	Working Voltage (dc or ac peak)	At sea level, inner conductor to shell = 500 V
	Proof Voltage (dc or ac peak)	At sea level = 1500 V
	Insulation Resistance	5 G Ω minimum
	Contact Resistance*	Center contact: 5.0m Ω maximum. Outer contact: 1.0m Ω maximum
	Reflection Coefficient	Refer to CECC122300
MECHANICAL	Current Rating	1.5 A dc maximum
	Engagement Forces	All snap-on, Screw-Lock & Posi-Lock styles except U Links = 60 N (13.5 lbs.) maximum U Links (reduced force snap-on) = 40 N (9 lbs.) maximum
	Separation Forces	All snap-on, Screw-Lock & Posi-Lock styles except U Links = 60 N (13.5 lbs.) max, 8 N (1.8 lbs.) min. U Links (reduced force snap-on) = 40 N (9 lbs.) maximum, 20 N (4.5 lbs.) minimum
	Posi-Lock Latch withstand Pull	220 N (50 lbs.)
	Contact and Insulator Retention	21 N (4.7 lbs.)
ENVIRONMENTAL	Materials	Body components: Copper or zinc alloy. Center contacts (male/female): Copper alloy. Insulators: PTFE or thermoset plastic. Crimp ferrules: Annealed copper alloy
	Finish/Plating	Center contacts: Gold. Outer contacts: Gold. Other metal parts: Nickel, tin or zinc
	Vibration Severity	(a) Frequency range: 10 Hz to 500 Hz. (b) Displacement**: 0,75 (.029). (c) Acceleration**: 98 m/s ² (321 ft./s ²). (d) Duration: 6 hours. ** Cross over at approx. 60 Hz
	Shock Severity	490 m/s ² for 11 ms
	Impact Severity (free specimens only)	5 impacts at 1m
GENERAL	Climatic Category	40/100/21
	Bump	4000 total at 390 m/s ²
	Free Fall (U Link only)	BS2011: Part 2.1 Ed. Procedure 2. Severity: 50 falls
Connector Durability	250 matings minimum	

*Except U Link connectors. See BS9210 F0022 for details.

NOTES

¹⁾ Values in this specification are typical for this range. Specific connectors may vary.

²⁾ Cannon 75 ohm coaxial connectors are designed to meet or exceed the requirements of BS9210F0022 where applicable. This specification may be superseded by CECC122 300 and the details listed above are subject to change without notice to comply with changes in these specifications.

Mating Interfaces

Please note that the description of the 2 halves follow the UK telecom format. In other regions a plug may be called a jack, and a socket may be called a plug. Please take care when choosing your connectors.

Cannon 75 Ohm Connectors

1.0/2.3

The Cannon 75 ohm 1.0/2.3 connector series are widely used in applications requiring a high density solution and have become a standard in telecommunications in many parts of the world.

Designed to meet the requirements of DIN 47247 and CECC 22230, these connectors feature a push/pull coupling mechanism to ensure mating integrity and a snap-on interface for ease of connection. Due to their small size these connectors can be densely packed while providing significant space savings over other 75 ohm connector products.

In addition, we offer the Type 54 version of the 1.0/2.3 connector which meets the requirements of BT RC9333. The Type 54 connector combines the 1.0/2.3 interface and push-pull locking system with the termination methods and tooling benefits of the Type 43 (SMZ) connector.

Our newest product offering for this connector series is the 1.0/2.3 HD (High Density) connector. By re-engineering the latching mechanism we were able to successfully reduce the size of the connector by 20% allowing even greater density than the standard 1.0/2.3 plug.

Choice of 3 styles – Standard, High Density or Type 54

Applications

- Switching Equipment
- DSX Cross Connects
- Base Stations
- Routers
- Wireless
- Telecom
- LAN Equipment

Features and Benefits

Push-pull locking mechanism for secure coupling and ease of engagement and separation

Designed for the most commonly used cables in North America and Europe

New High Density version with 6.2mm outside diameter

Three-part construction with crimp inner contact and outer ferrule (no soldering required)

Ideal for applications requiring a high density solution (space savings)

Uses industry standard crimp tooling

Available in a Type 54 configuration

Cable connectors designed for field installation

High performance gold plated contact area ensures reliable long term operation

Cannon 75 Ohm Connectors

Telecom Baluns

ITT's telecom baluns, for use in ITU G.703 applications, converts between a 120 ohm twisted pair and a 75 ohm coaxial transmission line.

These balun connectors have the transformer built into the body, and can be quickly connected to screened or unscreened twisted pair cables through IDC terminations, using a simple assembly tool. The small size allows these connectors to be mounted on a pitch of 10mm.

The balun is ideal for use where it is necessary to interconnect equipment with 75 ohm coaxial outputs to a 120 ohm cable distribution system. The balun is only a little larger than the connector that it would replace.

Features and Benefits

IDC termination	Small size	RoHS 5 Compliant
Quick and simple termination procedure	Meets G.703 standards	

Specifications

Nominal Impedance	Coaxial 75 ohm Twisted pair 120 ohm
Frequency Range	50 kHz - 10 MHz
Return loss 75 ohm and 120 ohm	51 - 102 kHz >18dB 102 - 2048 kHz >25dB 2048 - 3072 kHz >23dB 3072 - 10000 kHz >16dB
Wire Size	Conductor 0.5mm copper Insulation 1.4mm

QT-BNC

This innovative termination technique provides the QT-BNC with a high pressure, gas tight center conductor joint of exceptional mechanical integrity, without crimping the center contact. The QT-BNC is a 75 ohm pre-assembled connector with an integral central contact and rear crimp ferrule. This connector may be terminated onto cable in under 20 seconds, significantly reducing installation costs.

Applications

- Central Office Switching • Cross Connect Equipment • Telecommunications

Features and Benefits

Designed to simplify field installations with less piece parts

Optional right angle strain relief boot accessory (show above)

Telcordia Audited and Approved

Plastic rear cap is color coded for easy identification of cable type

Compatible with select competitive crimp tools and die sets

3:1 reduction in assembly time than conventional 3 piece crimp BNC plugs

RoHS Compliant Part Numbers

Specifications

Bump	4000 total at 390 m/s ²

1.6/5.6

The Cannon range of 1.6/5.6 connectors are suitable for use in 75 ohm communication systems and have become the recognized standard in telecommunications in many parts of the world.

Designed around the requirements of DIN 47295, CECC 22240 and IEC 169-13, these connectors are designed for field installation and feature threaded couplings to ensure mating integrity and a snap-on interface for ease of connection.

The range of parts shown in this publication includes plug and jack connectors for a variety of cables. Other cable types and connector styles may be available on request.

Applications

- Switching Equipment • DSX Cross Connects • Base Stations • Routers • Wireless • Telecom • LAN Equipment

Features and Benefits

Threaded coupling mechanism to ensure secure connection and snap-on interface for ease of engagement and separation

Three-part construction with crimp inner contact and outer ferrule (no soldering required)

Designed for the most commonly used telecom cables in North America and Europe

Most installations require no special tooling

Designed for field installation

Cannon 75 Ohm Connectors

Product Safety Information

THIS NOTE MUST BE READ IN CONJUNCTION WITH THE PRODUCT DATA SHEET/CATALOG. FAILURE TO OBSERVE THE ADVICE IN THIS INFORMATION SHEET AND THE OPERATING CONDITIONS SPECIFIED IN THE PRODUCT DATA SHEET/ CATALOG COULD RESULT IN HAZARDOUS SITUATIONS.

1. MATERIAL CONTENT AND PHYSICAL FORM

Electrical connectors do not usually contain hazardous materials. They contain conducting and non-conducting materials and can be divided into two groups.

a) Printed circuit types and low cost audio types which employ all plastic insulators and casings.

b) Rugged, Fire Barrier and High Reliability types with metal casings and either natural rubber, synthetic rubber, plastic or glass insulating materials. Contact materials vary with type of connector and also application and are usually manufactured from either: Copper, copper alloys, nickel, alumel, chromel or steel. In special applications, other alloys may be specified.

2. FIRE CHARACTERISTICS AND ELECTRIC SHOCK HAZARD

There is no fire hazard when the connector is correctly wired and used within the specified parameters. Incorrect wiring or assembly of the connector or careless use of metal tools or conductive fluids, or transit damage to any of the component parts may cause electric shock or burns. Live circuits must not be broken by separating mated connectors as this may cause arcing, ionization and burning. Heat dissipation is greater at maximum resistance in a circuit. Hot spots may occur when resistance is raised locally by damage, e.g. cracked or deformed contacts, broken strands of wire. Local overheating may also result from the use of the incorrect application tools or from poor quality soldering or slack screw terminals. Overheating may occur if the ratings in the product Data Sheet/Catalog are exceeded and can cause breakdown of insulation and hence electric shock. If heating is allowed to continue it intensifies by further increasing the local resistance through loss of temper of spring contacts, formation of oxide film on contacts and wires and leakage currents through carbonization of insulation and tracking paths. Fire can then result in the presence of combustible materials and this may release noxious fumes. Overheating may not be visually apparent. Burns may result from touching overheated components.

3. HANDLING

Care must be taken to avoid damage to any component parts of electrical connectors during installation and use. Although there are normally no sharp edges, care must be taken when handling certain components to avoid injury to fingers. Electrical connectors may be damaged in transit to the customers, and damage may result in creation of hazards. Products should therefore be examined prior to installation/use and rejected if found to be damaged.

4. DISPOSAL

Incineration of certain materials may release noxious or even toxic fumes.

5. APPLICATION

Connectors with exposed contacts should not be selected for use on the current supply side of an electrical circuit, because an electric shock could result from touching exposed contacts on an unmated connector. Voltages in excess of 30 V ac or 42.5 V dc are potentially hazardous and care should be taken to ensure that such voltages cannot be transmitted in any way to exposed metal parts of the connector body. The connector and wiring should be checked, before making live, to have no damage to metal parts or insulators, no solder blobs, loose strands, conducting lubricants, swarf, or any other undesired conducting particles. Circuit resistance and continuity check should be made to make certain that there are no high resistance joints or spurious conducting paths. Always use the correct application tools as specified in the Data Sheet/Catalog. Do not permit untrained personnel to wire, assemble or tamper with connectors. For operation voltage please see appropriate national regulations.

IMPORTANT GENERAL INFORMATION

(i) Air and creepage paths/Operating voltage. The admissible operating voltages depend on the individual applications and the valid national and other applicable safety regulations.

For this reason the air and creepage path data are only reference values. Observe reduction of air and creepage paths due to PC board and/or harnessing.

(ii) Temperature

All information given are temperature limits. The operation temperature depends on the individual application.

(iii) Other important information

Cannon continuously endeavors to improve their products. Therefore, Cannon products may deviate from the description, technical data and shape as shown in this catalog and data sheets.

Rack & Panel Connectors

ITT is the world leader in rack and panel connectors, offering unmatched variety of shell configurations and insert arrangements, materials, plating and contact options. Many of our standard and custom designs meet the stringent requirements of ARINC 600, ARINC 404 (MIL-C-81659), and MIL-DTL-83733 standards.

www.ittcannon.com/rackandpanel

Circular/Filter/Hermetic Connectors

As a world leader in circular, filter and hermetic connectors, ITT can leverage its design and manufacturing expertise to fit virtually any application. Our expertise includes fast positive mating for a wide range of military applications, as well as numerous sizes and contact configuration for various harsh environments. ITT can also meet numerous specs, including NATO and MIL standards.

www.ittcannon.com/circulars • www.ittcannon.com/filter • www.ittcannon.com/hermetics

D-Subminiature Connectors

Cannon invented D-sub connectors in 1952. Our family of D-Subs now includes combinations of signal, power and RF, as well as severe service sealed connectors. Cannon D-Subs are available with an extensive line of backshells and accessories and are one of the most economical shielded connector solutions available. Qualified to the MIL-DTL-24308 specification.

www.ittcannon.com/dsubs

Fiber Optic Connectors and Cable Assemblies

Cannon fiber optic solutions provide an excellent performance/cost value. Performance can be tailored to the end system, and our use of superior materials and bonding agents provides highly effective solutions. Our wide variety of products includes fiber optic hybrid contacts, multi-channel, rack and panel, and hi-rel assemblies, including MIL and ARINC standard solutions.

www.ittcannon.com/fiberoptics

Microminiature Connectors

Cannon microminiature connectors offer high performance and reliability with exceptional versatility. Available in rectangular, circular and strip configurations for countless applications, many of our connectors meet or exceed applicable requirements of the MIL-DTL-83513 specification.

www.ittcannon.com/micro

ITT's Electronic Components business (www.ittcannon.com) is an international supplier of connectors, interconnects, cable assemblies, I/O card kits and smart card systems. As a worldwide leader in connector technology for nearly a century, ITT offers one of the industry's broadest product offerings, manufacturing capability worldwide, fast time to market, high volume/high yield capacity, robust design and Value-Based Product Development and an extensive sales and customer support network.
