NC7SB3157 TinyLogic[™] Low Voltage UHS SPDT Analog Switch or 2:1 Multiplexer/Demultiplexer Bus Switch

General Description

The NC7SB3157 is a high performance, single-pole/double-throw (SPDT) Analog Switch or 2:1 Multiplexer/Demultiplexer Bus Switch from Fairchild's Ultra High Speed Series of TinyLogicTM. The device is fabricated with advanced sub-micron CMOS technology to achieve high speed enable and disable times and low On Resistance. The break before make select circuitry prevents disruption of signals on the B Port due to both switches temporarily being enabled during select pin switching. The device is specified to operate over the 1.65 to 5.5V $V_{\rm CC}$ operating range. The control input tolerates voltages up to 5.5V independent of the $V_{\rm CC}$ operating range.

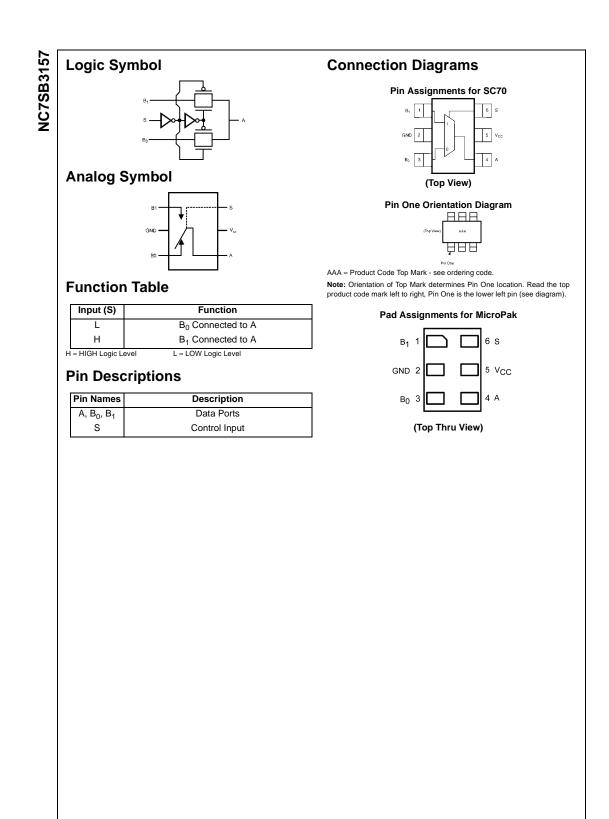

Features

- Useful in both analog and digital applications
- Space saving SC70 6-lead surface mount package
- Ultra small MicroPak[™] leadless package
- I Low On Resistance; < 10 Ω on typ @ 3.3V V_{CC}

Note 1: Absolute maximum ratings are DC values beyond which the device may be damaged or have its useful life impaired. The datasheet specifications should be met, without exception, to ensure that the system design is reliable over its power supply, temperature, and output/input loading variables. Fairchild does not recommend operation outside datasheet specifications.

Note 2: The input and output negative voltage ratings may be exceeded if the input and output diode current ratings are observed.

Note 3: Control input must be held HIGH or LOW, it must not float.

Note 11: Off Isolation = 20 $\log_{10} [V_A / V_{Bn}]$

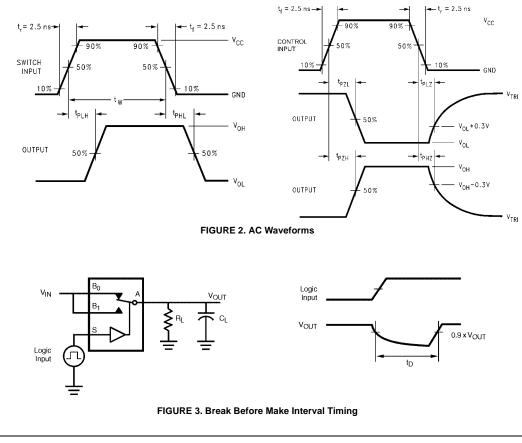

Note 12: $T_A = +25^{\circ}C$, f = 1 MHz, Capacitance is characterized but not tested in production.
