The Fujitsu MB40776H and MB40776 are a 6-bit low power ultra-high speed video D/A converter fabricated with Fujitsu Advanced Bipolar Technology. The MB40776H and MB40776 can convert 6-bit digital signals into analog signals at a rate of DC to 60 megasamples/sec (MSPS) for MB40776H and 20MSPS for MB40776. Because of such high speed operation, the both of them are suitable for applications such as digital color TV, video processing with computer, radar signal processing.

This device contains circuitry to protect the inputs against damage due to high static voltages or electric fields. However, it is advised that normal precautions be taken to avoid application of any voltage higher than maximum rated voltages to this high impedance circuit.

ABSOLUTE MAXIMUM RATINGS (See NOTE)

Rating	Symbol	Value	Unit
Power Supply Voltage	V_{CCA} V_{CCD}	-0.5 to +7.0	V
Digital Input Voltage	V_{IND}	-0.5 to +7.0	V
Analog Reference Voltage	V_{REF}	3.70 to $V_{CC} + 0.5$	V

NOTE: Permanent device damage may occur if the above **Absolute Maximum Ratings** are exceeded. Functional operation should be restricted to the conditions as detailed in the operational sections of this data sheet. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.
