## DESCRIPTION

The DG417L/418L/419L are low voltage pin-for-pin compatible companion devices to the industry standard DG417/418/419 with improved performance

Using BiCMOS wafer fabrication technology allows the DG417L/418L/419L to operate on single and dual supplies. Single supply voltage ranges from 3 to 12 V while dual supply operation is recommended with  $\pm 3$  to  $\pm 6$  V.

Combining high speed ( $t_{ON}$ : 28 ns), flat  $r_{ON}$  over the analog signal range (6  $\Omega$ ), minimal insertion lose (up to 100 MHz), and excellent crosstalk and off-isolation performance (-70 dB at 1 MHz), the DG417L/418L/419L are ideally suited for audio and video signal switching.

The DG417L and DG418L respond to opposite control logic as shown in the Truth Table. The DG419L has an SPDT configuration.

Notes:

- Leakage parameters are guaranteed by worst case test condition and not subject to production test.
- Room = 25°C, Full = as determined by the operating temperature suffix.
- Typical values are for DESIGN AID ONLY, not guaranteed nor subject to production testing.
- The algebraic convention whereby the most negative value is a minimum and the most positive a maximum, is used in this data sheet.
- Guaranteed by design, not subject to production test.
- $V_{IN}$  = input voltage to perform proper function.
