### DESCRIPTION

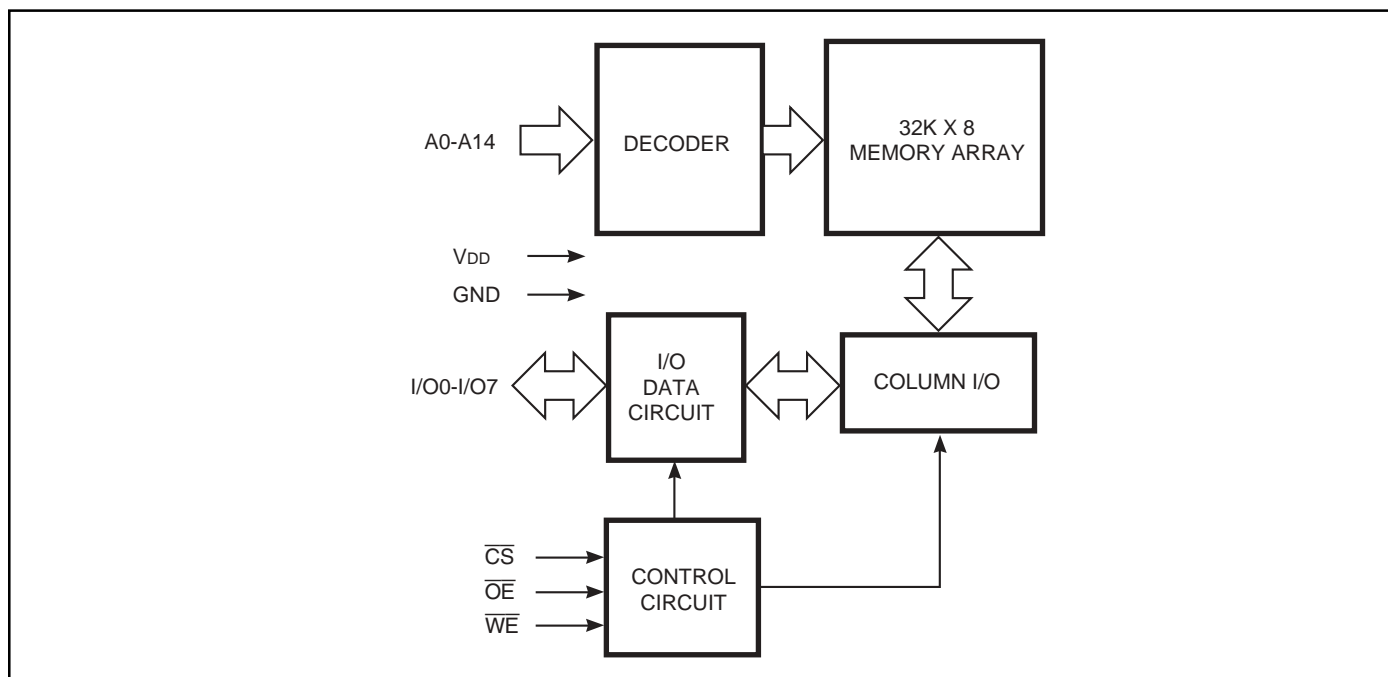

The *ISSI* IS65C256 is a low power, 32,768 word by 8-bit CMOS static RAM. It is fabricated using *ISSI*'s high-performance, low power CMOS technology.

When CS is HIGH (deselected), the device assumes a standby mode at which the power dissipation can be reduced down to 250  $\mu$ W (typical) at CMOS input levels.

Easy memory expansion is provided by using an active LOW Chip Select (CS) input and an active LOW Output Enable (OE) input. The active LOW Write Enable (WE) controls both writing and reading of the memory.

The IS65C256 is Packaged in the JEDEC Standard 28-Pin SOP and 28-Pin TSOP (Type I).
