

- Frequency range 0.625MHz to 50.0MHz
- CMOS/TTL Output
- Supply Voltage 5.0 V or 3.3 VDC
- Integrated Phase Jitter 1ps typical
- Low cost unit

DESCRIPTION

G62 VCXOs, are packaged in a miniature 11.4mm x 9.6mm x 2.5mm 6 pad SMD package. Typical phase jitter for G series VCXOs is <1ps, output CMOS/TTL. G series VCXOs use fundamental mode crystal oscillators. Applications include phase lock loop, SONET/ATM, settop boxes, MPEG, audio/video modulation, video game consoles and HDTV.

SPECIFICATION

Frequency Range	
Vdd = +3.3VDC:	0.625MHz to 50.0MHz
Vdd = +5.0VDC:	1.0MHz to 50.0MHz
Supply Voltage:	+3.3 VDC ±5% or +5.0VDC±5%
Output Logic:	TTL/HCMOS
Integrated Phase Jitter:	1.0ps maximum 12kHz to 20MHz
Period Jitter RMS:	2.0ps typical
Period Jitter Peak to Peak:	14ps maximum
Phase Noise:	See table below
Initial Frequency Accuracy	
Tune to the nominal frequency witl	
+3.3VDC:	Vc= 1.65V ±0.2V
+5.0 VDC:	Vc= 2.5V ±0.2V
Output Voltage HIGH (1):	90% Vdd minimum
Output Voltage LOW (0):	10% Vdd maximum
Control Voltage Centre	
+3.3VDC:	1.65V
+5.0VDC:	2.5V
Control Voltage Range	
+3.3VDC:	0.3V to 3.0V
+5.0VDC:	0.5V to 4.5V
Pulling Range	.00100
+3.3VDC	±80ppm to ±120ppm (standard)
+5.0VDC:	±80ppm to ±150ppm
Tanananatura Ctabilitu	(±200ppm available) See table
Temperature Stability:	
Output Load: Start-up Time:	CMOS = 15pF, TTL = 2 gates 10ms maximum, 5ms typical
Duty Cycle:	50% ±5% measured at 50% Vdd
Rise/Fall Times:	0.7ns typical (15pF load)
Current Consumption:	10 to 45mA, frequency
Correm Consumption:	dependent
Linearity:	10% maximum, 6% typical
Modulation Bandwidth:	10kHz minimum
Input Impedance:	1 MΩ minimum
Slope Polarity:	Monotonic and Positive. (An
(Transfer function)	increase of control voltage
(Transfer fortellori)	always increases output
	frequency.)
Storage Temperature:	-50° to +100°C
Ageing:	±5ppm per year maximum
RoHS Status:	Fully compliant
NOTIS SIGIOS.	Tony compilarii
	/ 1

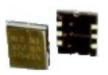

FREQUENCY STABILITY

Stability Code	Stability ±ppm	Temp. Range
Α	25	0°∼+70°C
В	50	0°∼+70°C
С	100	0°∼+70°C
D	25	-40°~+85°C
Е	50	-40°~+85°C
F	100	-40°~+85°C
If non-standard frequency stability is required		

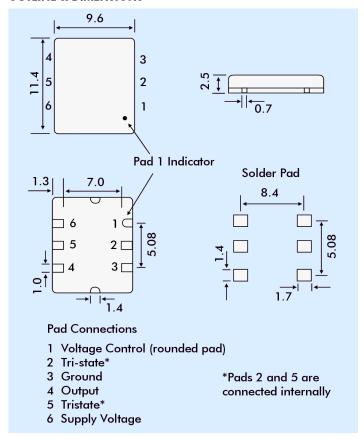

Use 'I' followed by stability, i.e. I20 for ±20ppm

11.4 x 9.6 x 2.5mm 6 pad SMD
