

MCP (Multi-Chip Package) FLASH MEMORY

CMOS

8M (× 8/× 16) FLASH MEMORY & 8M (× 8/× 16) FLASH MEMORY

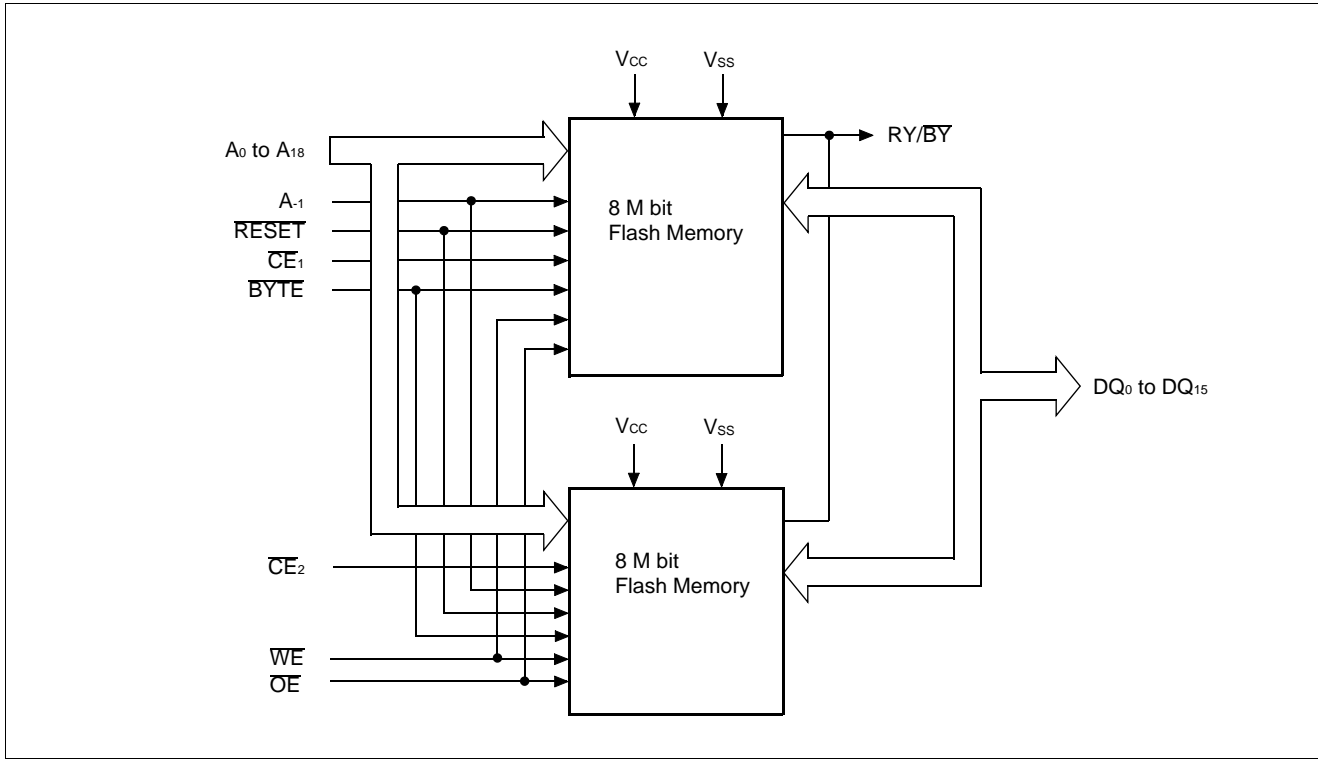

MB84VB2000-10/MB84VB2001-10

■ FEATURES

- Contain 2 chips of MBM29LV800A, and each chip have separate \overline{CE} .
- Power supply voltage of 2.7 to 3.6 V
- High performance
100 ns maximum access time
- Operating Temperature
-40 to +85°C
- Minimum 100,000 write/erase cycles
- Sector erase architecture
One 16 K byte, two 8 K bytes, one 32 K byte, and fifteen 64 K bytes × 2 chips
Any combination of sectors can be concurrently erased. Also supports full chip erase.
- Boot Code Sector Architecture
MB84VB2000: Top sector
MB84VB2001: Bottom sector
- Embedded Erase™ Algorithms
Automatically pre-programs and erases the chip or any sector
- Embedded Program™ Algorithms
Automatically writes and verifies data at specified address
- Data Polling and Toggle Bit feature for detection of program or erase cycle completion
- Ready/Busy output (RY/BY)
Hardware method for detection of program or erase cycle completion
- Automatic sleep mode
When addresses remain stable, automatically switch themselves to low power mode.
- Low V_{cc} write inhibit ≤ 2.5 V
- Erase Suspend/Resume
Suspends the erase operation to allow a read data in another sector within the same device
- Please refer to "MBM29LV800TA/BA" data sheet in detailed function

Notes: 1.Manufacturer and device codes may also be accessed via a command register write sequence. See Table 7.

2.Refer to the section on Sector Protection.

3. \overline{WE} can be V_{IL} if \overline{OE} is V_{IL}, \overline{OE} at V_{IH} initiates the write operations.

4.V_{CC} = 3.3 V ±10%

5.Do not apply $\overline{CE}_1 = \overline{CE}_2 = V_{IL}$ at a time.

Address bits A₁₁ to A₁₇ = X = "H" or "L" for all address commands except or Program Address (PA) and Sector Address (SA).

Bus operations are defined in Tables 2 and 3.

The system should generate the following address patterns:

Word Mode: 555H or 2AAH to addresses A₀ to A₁₀

Byte Mode: AAH or 555H to addresses A₋₁ and A₀ to A₁₀

Both Read/Reset commands are functionally equivalent, resetting the device to the read mode.

RA =Address of the memory location to be read

PA =Address of the memory location to be programmed

Addresses are latched on the falling edge of the write pulse.

SA =Address of the sector to be erased. The combination of A₁₈, A₁₇, A₁₆, A₁₅, A₁₄, A₁₃, and A₁₂ will uniquely select any sector.

RD =Data read from location RA during read operation.

PD =Data to be programmed at location PA. Data is latched on the falling edge of write pulse.

SPA:Sector address to be protected. Set sector address (SA) and (A₆, A₁, A₀) = (0, 1, 0).

SD:Sector protection verify data. Output 01H at protected sector addresses and output 00H at unprotected sector addresses.

■ ABSOLUTE MAXIMUM RATINGS

Storage Temperature	-55°C to +125°C
Ambient Temperature with Power Applied	-25°C to +85°C
Voltage with Respect to Ground All pins (Note)	-0.3 V to $V_{CC} + 0.5$ V
V_{CCf}/V_{CCS} Supply (Note)	-0.3 V to +4.6 V

Note: Minimum DC voltage on input or I/O pins are -0.5 V. During voltage transitions, inputs may negative overshoot V_{SS} to -2.0 V for periods of up to 20 ns. Maximum DC voltage on output and I/O pins are $V_{CCf} + 0.5$ V or $V_{CCS} + 0.5$ V. During voltage transitions, outputs may positive overshoot to $V_{CC} + 2.0$ V for periods of up to 20 ns.

WARNING: Semiconductor devices can be permanently damaged by application of stress (voltage, current, temperature, etc.) in excess of absolute maximum ratings. Do not exceed these ratings.

■ RECOMMENDED OPERATING RANGES

Commercial Devices	
Ambient Temperature (T_A)	-40°C to +85°C
V_{CC} Supply Voltages	+2.7 V to +3.6 V

Operating ranges define those limits between which the functionality of the device is guaranteed.

WARNING: Recommended operating conditions are normal operating ranges for the semiconductor device. All the device's electrical characteristics are warranted when operated within these ranges.

Always use semiconductor devices within the recommended operating conditions. Operation outside these ranges may adversely affect reliability and could result in device failure.

No warranty is made with respect to uses, operating conditions, or combinations not represented on the data sheet. Users considering application outside the listed conditions are advised to contact their FUJITSU representative beforehand.

- Notes:**
1. The I_{CC} current listed includes both the DC operating current and the frequency dependent component (at 10 MHz).
 2. I_{CC} active while Embedded Algorithm (program or erase) is in progress.
 3. Automatic sleep mode enables the low power mode when address remain stable for 150 ns.
 4. (V_{ID} - V_{CC}) do not exceed 9 V.
 5. Total power consumption is (condition of Flash 1) + (condition of Flash 2).

■ SWITCHING WAVEFORMS

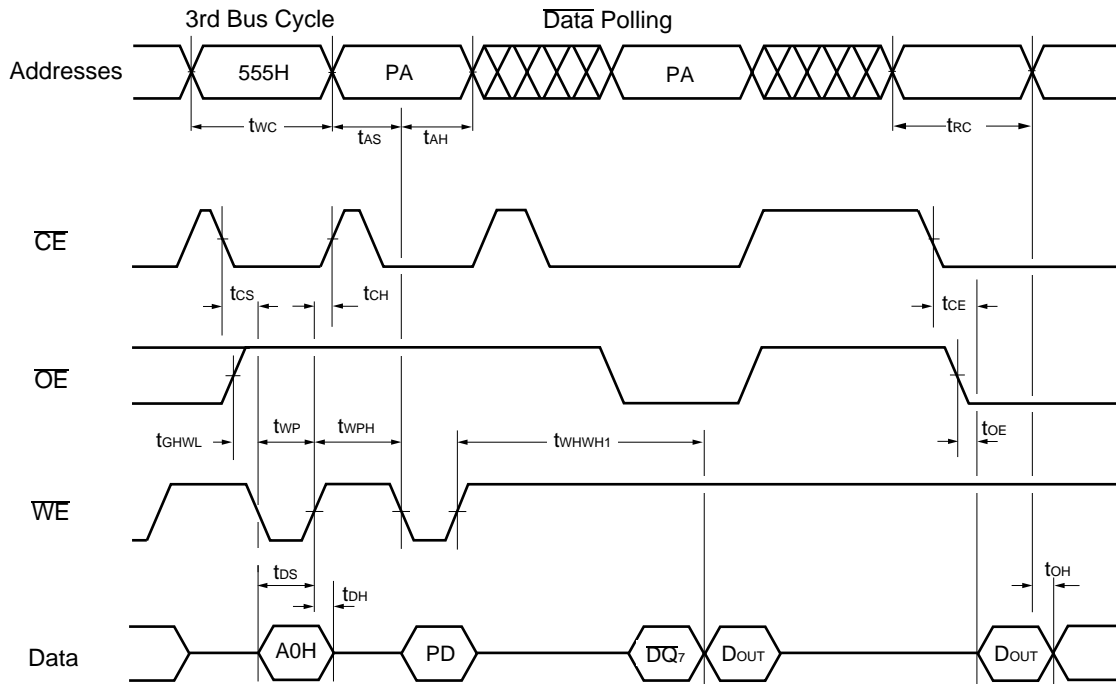

Figure 2 AC Waveforms for Read Operations

- Notes:**
1. PA is address of the memory location to be programmed.
 2. PD is data to be programmed at byte address.
 3. \overline{DQ}_7 is the output of the complement of the data written to the device.
 4. D_{OUT} is the output of the data written to the device.
 5. Figure indicates last two bus cycles out of four bus cycle sequence.
 6. These waveforms are for the ×16 mode. (The addresses differ from ×8 mode.)

The contents of this document are subject to change without notice. Customers are advised to consult with FUJITSU sales representatives before ordering.

The information and circuit diagrams in this document presented as examples of semiconductor device applications, and are not intended to be incorporated in devices for actual use. Also, FUJITSU is unable to assume responsibility for infringement of any patent rights or other rights of third parties arising from the use of this information or circuit diagrams.

FUJITSU semiconductor devices are intended for use in standard applications (computers, office automation and other office equipment, industrial, communications, and measurement equipment, personal or household devices, etc.).

CAUTION:

Customers considering the use of our products in special applications where failure or abnormal operation may directly affect human lives or cause physical injury or property damage, or where extremely high levels of reliability are demanded (such as aerospace systems, atomic energy controls, sea floor repeaters, vehicle operating controls, medical devices for life support, etc.) are requested to consult with FUJITSU sales representatives before such use. The company will not be responsible for damages arising from such use without prior approval.

Any semiconductor devices have inherently a certain rate of failure. You must protect against injury, damage or loss from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions.

If any products described in this document represent goods or technologies subject to certain restrictions on export under the Foreign Exchange and Foreign Trade Control Law of Japan, the prior authorization by Japanese government should be required for export of those products from Japan.
