Revision History

Date	Revision	Description
October 2004	3.43	Added OPN for model 4000+ desktop.
October 2004	3.41	Added FX-55 OPN. Added desktop OPNs for models 3000+, 3200+, and 3500+. Documented T_{CONTROL} max parameter for all OPNs. Removed chapters 3, 4, and 6.
August 2004	3.37	Added AMD Sempron™ Processor and Mobile AMD Sempron™ Processor chapters. Removed model 3100+ 62W OPN. Added DTR Model 3700+ OPN.
July 2004	3.29	Added model 3400+ 62W mobile OPN.
June 2004	3.25	Added rev CG 89W model 3500+, 3700+, and 3800+ OPNs. Added FX-53 939 pin package OPN. Added one decimal precision to some IDD numbers. Updated document references.
May 2004	3.21	Added rev CG 35W models 2700+ and 2800+.
April 2004	3.19	Removed rev CG 35W OPN.
April 2004	3.17	Corrected model number formatting for DTR OPNs.
March 2004	3.15	Added rev CG 35W model 2700+ OPN.
March 2004	3.13	Added rev CG model 2800+, 3000+, and 3200+ 89W OPNs. Added FX-53 940 pin package OPN. Corrected note for C3 state on all Power/Thermal Specification tables. Added package drawing references for lidless parts in OPN decode section.
January 2004	3.11	Added rev CG entries for existing rev C0 parts. Corrected Max FID code for model 3200+ 62W mobile OPN. Updated FX-51 Halt/Stop Grant power number. Revised IDD Max and TDP for Intermediate P-state #2 for 754 pin lidless package Rev C0 DTR Model 3200+.
January 2004	3.07	Added model 3400+ DT and DTR parts. Added model 2800+, 3000+, and 3200+ 62W Mobile parts.
December 2003	3.06	Added model 3000+ desktop part.
November 2003	3.05	General clean up. Updated S3 I/O power for non-FX parts. Fixed mobile OPN example. Added thermal resistance specifications for all OPNs.
September 2003	3.02	Changed min P-state information to N/A in Table 8, and removed unreleased entries from Table 4 and Table 14.
September 2003	3.00	Initial public release.

Chapter 1 AMD Athlon™ 64 Desktop Processor

The specifications for the AMD Athlon™ 64 processor are listed in Table 7 on page 8. Each column represents a specific ordering part number (OPN). Figure 1 provides an example of the OPN structure for this processor family.

Refer to the *AMD Athlon™ 64 Product Data Sheet*, order# 24659 for all other electrical specifications for the processor, and refer to the *BIOS and Kernel Developer’s Guide for AMD Athlon™ 64 and AMD Opteron™ Processors*, order# 26094 for power management BIOS requirements.

Notes:

1. Thermal Design Power (TDP) is measured under the conditions of T_{CASE} Max, IDD Max, and VDD=VID_VDD, and include all power dissipated on-die from VDD, VDDIO, VLDT, VTT, and VDDA.
2. Assumes t_{CASE} max, VDD, clock divider set to 32.
3. Assumes 50°C, VDD nom, clock divider set to 32.
4. Assumes 35°C, VDD, VDDA, and VLDT supplies are off, VDDIO and VTT are powered, memory in self-refresh mode and DDR SDRAM interface tristated except CKE pins.
5. Thermal Design Power for VDDIO, VTT, VLDT, and VDDA power planes only.
6. Thermal Design Power for VDDIO and VTT power planes only.
7. CPUID extended function 8000_0001h fields are used by the BIOS in uniquely associating a given processor to the P-states that are valid for that processor. Refer to the *BIOS and Kernel Developer's Guide for AMD Athlon™ 64 and AMD Opteron™ Processors*, order# 26094

8. FIDVID Status Register, MSR C001_0042h.
9. Ambient temperature into heat sink (internal ambient) assumed to be 42°C.
10. Refer to the *AMD Athlon™ 64 Processor Desktop Power Roadmap*, order #26882, for IDD Max and Thermal Design Power requirements for future processor revisions.
11. $T_{CASE\ max}$ is the maximum case temperature specification which is a physical value in degrees Celsius. This value is programmed into Rev D and later processors. Refer to the appropriate functional data sheet, and the THERMTRIP Status Register in the *BIOS and Kernel Developer's Guide for AMD Athlon™ 64 and AMD Opteron™ Processors*, order# 26094.
12. $T_{CONTROL\ max}$ (maximum control temperature) is a non physical temperature on an arbitrary scale that can be used for system thermal management policies. $T_{CONTROL\ max}$ represents the value at which the processor has reached $T_{CASE\ max}$ when measuring the thermal diode with a dual sourcing current temperature sensor. Refer to the appropriate functional data sheet, and the THERMTRIP Status Register in the *BIOS and Kernel Developer's Guide for AMD Athlon™ 64 and AMD Opteron™ Processors*, order# 26094. Temperature is in degrees Celsius on the $T_{CONTROL}$ scale.

Chapter 2 AMD Athlon™ 64 FX Desktop Processor

The specifications for the AMD Athlon™ 64 FX processor are listed in Table 13 on page 17. Each column represents a specific ordering part number (OPN). Figure 2 provides an example of the OPN structure for this processor family.

Refer to the *AMD Athlon™ 64 FX Product Data Sheet*, order# 30431 for all other electrical specifications for the processor. Refer to the *BIOS and Kernel Developer's Guide for AMD Athlon™ 64 and AMD Opteron™ Processors*, order# 26094 for power management BIOS requirements.

Notes:

1. Thermal Design Power (TDP) is measured under the conditions of T_{CASE} Max, IDD Max, and VDD=VID_VDD, and include all power dissipated on-die from VDD, VDDIO, VLDT, VTT, and VDDA.
2. Assumes t_{CASE} max, VDD, clock divider set to 32.
3. Assumes 50°C, VDD nom, clock divider set to 32.
4. Assumes 35°C, VDD, VDDA, and VLDT supplies are off, VDDIO and VTT are powered, memory in self-refresh mode and DDR SDRAM interface tristated except CKE pins.
5. Thermal Design Power for VDDIO, VTT, VLDT, and VDDA power planes only.
6. Thermal Design Power for VDDIO and VTT power planes only.
7. CPUID extended function 8000_0001h fields are used by the BIOS in uniquely associating a given processor to the P-states that are valid for that processor. Refer to the *BIOS and Kernel Developer's Guide for AMD Athlon™ 64 and AMD Opteron™ Processors*, order# 26094.
8. FIDVID Status Register, MSR C001_0042h.
9. Ambient temperature into heat sink (internal ambient) assumed to be 42°C.
10. T_{CASE} max is the maximum case temperature specification which is a physical value in degrees Celsius. This value is programmed into Rev D and later processors. Refer to the appropriate functional data sheet, and the THERMTRIP Status Register in the *BIOS and Kernel Developer's Guide for AMD Athlon™ 64 and AMD Opteron™ Processors*, order# 26094.
11. T_{CONTROL} max (maximum control temperature) is a non physical temperature on an arbitrary scale that can be used for system thermal management policies. T_{CONTROL} max represents the value at which the processor has reached T_{CASE} max when measuring the thermal diode with a dual sourcing current temperature sensor. Refer to

the appropriate functional data sheet, and the THERMTRIP Status Register in the *BIOS and Kernel Developer's Guide for AMD Athlon™ 64 and AMD Opteron™ Processors*, order# 26094.

12. Ambient temperature into heat sink (internal ambient) assumed to be 40°C.

Chapter 3 AMD Sempron™ Desktop Processor

The specifications for the AMD Sempron™ processor are listed in Table 20 on page 23. Each column represents a specific Ordering Part Number (OPN). Figure 3 provides an example of the OPN structure for this processor family.

Refer to the *AMD Sempron™ Product Data Sheet*, order# 31805, for all other electrical specifications for the processor. Refer to the *BIOS and Kernel Developer's Guide for AMD Athlon™ 64 and AMD Opteron™ Processors*, order# 26094 for power management BIOS requirements.

Notes:

1. Thermal Design Power (TDP) is measured under the conditions of T_{CASE} Max, IDD Max, and VDD=VID_VDD, and include all power dissipated on-die from VDD, VDDIO, VLDT, VTT, and VDDA.
2. Assumes t_{CASE} max, VDD, clock divider set to 32.
3. Assumes 50°C, VDD nom, clock divider set to 32.
4. Assumes 35°C, VDD, VDDA, and VLDT supplies are off, VDDIO and VTT are powered, memory in self-refresh mode and DDR SDRAM interface tri-stated except CKE pins.
5. Thermal Design Power for VDDIO, VTT, VLDT, and VDDA power planes only.
6. Thermal Design Power for VDDIO and VTT power planes only.

7. CUID extended function 8000_0001h fields are used by BIOS in uniquely associating a given processor to the P-states that are valid for that processor. Refer to the *BIOS and Kernel Developer's Guide for AMD Athlon™ 64 and AMD Opteron™ Processors*, order# 26094
8. FIDVID Status Register, MSR C001_0042h.
9. Ambient temperature into heat sink (internal ambient) assumed to be 42°C.
10. $T_{CASE\ max}$ is the maximum case temperature specification which is a physical value in degrees Celsius. This value is programmed into Rev D and later processors. Refer to the appropriate functional data sheet, and the THERMTRIP Status Register in the *BIOS and Kernel Developer's Guide for AMD Athlon™ 64 and AMD Opteron™ Processors*, order# 26094.
11. $T_{CONTROL\ max}$ (maximum control temperature) is a non physical temperature on an arbitrary scale that can be used for system thermal management policies. $T_{CONTROL\ max}$ represents the value at which the processor has reached $T_{CASE\ max}$ when measuring the thermal diode with a dual sourcing current temperature sensor. Refer to the appropriate functional data sheet, and the THERMTRIP Status Register in the *BIOS and Kernel Developer's Guide for AMD Athlon™ 64 and AMD Opteron™ Processors*, order# 26094. Temperature is in degrees Celsius on the $T_{CONTROL}$ scale.
