# Low Cost, Miniature Fiber Optic Components with ST ${ }^{\circledR}$, SMA, SC and FC Ports 

## Technical Data

## Features

- Meets IEEE 802.3 Ethernet and 802.5 Token Ring
Standards
- Low Cost Transmitters and Receivers
- Choice of ST ${ }^{\circledR}$, SMA, SC or FC Ports
- 820 nm Wavelength Technology
- Signal Rates up to 175 Megabaud
- Link Distances up to 4 km
- Specified with 50/125 $\mu \mathrm{m}$, 62.5/125 $\mu \mathrm{m}, 100 / 140 \mu \mathrm{~m}$, and $200 \mu \mathrm{~m}$ HCS ${ }^{\circledR}$ Fiber
- Repeatable ST Connections within 0.2 dB Typical
- Unique Optical Port Design for Efficient Coupling
- Auto-Insertable and Wave Solderable
- No Board Mounting Hardware Required
- Wide Operating Temperature Range $-40^{\circ} \mathrm{C}$ to $85^{\circ} \mathrm{C}$
- AlGaAs Emitters 100\% Burn-In Ensures High Reliability
- Conductive Port Option with the SMA and ST Threaded Port Styles

## Applications

- Local Area Networks
- Computer to Peripheral Links
- Computer Monitor Links
- Digital Cross Connect Links
- Central Office Switch/PBX Links
- Video Links
- Modems and Multiplexers
- Suitable for Tempest Systems
- Industrial Control Links

## Description

The HFBR-0400 Series of components is designed to provide cost effective, high performance fiber optic communication links for information systems and industrial applications with link distances of up to 4 kilometers. With the HFBR-24X6, the 125 MHz analog receiver, data rates of up to 175 megabaud are attainable.

## HFBR-0400 Series

Transmitters and receivers are directly compatible with popular "industry-standard" connectors: ST, SMA, SC and FC. They are completely specified with multiple fiber sizes; including $50 / 125 \mu \mathrm{~m}, 62.5 / 125 \mu \mathrm{~m}, 100 /$ $140 \mu \mathrm{~m}$, and $200 \mu \mathrm{~m}$.

Complete evaluation kits are available for ST and SMA product offerings; including transmitter, receiver, connectored cable, and technical literature. In addition, ST and SMA connectored cables are available for evaluation.

## LINK SELECTION GUIDE

| Data Rate (MBd) | Distance (m) | Transmitter | Receiver | Fiber Size $(\mu \mathbf{m})$ | Evaluation Kit |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 5 | 1500 | HFBR-14X2 | HFBR-24X2 | 200 HCS | N/A |
| 5 | 2000 | HFBR-14X4 | HFBR-24X2 | $62.5 / 125$ | HFBR-04X0 |
| 20 | 2700 | HFBR-14X4 | HFBR-24X6 | $62.5 / 125$ | HFBR-0414, <br> HFBR-0463 |
| 32 | 2200 | HFBR-14X4 | HFBR-24X6 | $62.5 / 125$ | HFBR-0414 |
| 55 | 1400 | HFBR-14X4 | HFBR-24X6 | $62.5 / 125$ | HFBR-0414 |
| 125 | 700 | HFBR-14X4 | HFBR-24X6 | $62.5 / 125$ | HFBR-0416 |
| 155 | 600 | HFBR-14X4 | HFBR-24X6 | $62.5 / 125$ | HFBR-0416 |
| 175 | 500 | HFBR-14X4 | HFBR-24X6 | $62.5 / 125$ | HFBR-0416 |

For additional information on specific links see the following individual link descriptions. Distances measured over temperature range from 0 to $70^{\circ} \mathrm{C}$.

## Applications Support Guide

This section gives the designer information necessary to use the HFBR-0400 series components to
make a functional fiber-optic transceiver. Agilent offers a wide selection of evaluation kits for hands-on experience with fiberoptic products as well as a wide
range of application notes complete with circuit diagrams and board layouts. Furthermore, Agilent's application support group is always ready to assist with any design consideration.

## Application Literature

HFBR-0400 Series Evaluation Kits
HFBR-0410 ST Evaluation Kit
Contains the following :

- One HFBR-1412 transmitter
- One HFBR-2412 five megabaud TTL receiver
- Three meters of ST connectored 62.5/125 ( $\mu \mathrm{m}$ fiber optic cable with low cost plastic ferrules.
- Related literature

## HFBR-0414 ST Evaluation Kit

Includes additional components to interface to the transmitter and receiver as well as the PCB to reduce design time.
Contains the following:

- One HFBR-1414T transmitter
- One HFBR-2416T receiver
- Three meters of ST connectored $62.5 / 125 \mu \mathrm{~m}$ fiber optic cable
- Printed circuit board
- ML-4622 CP Data Quantizer
- 74ACTIIOOON LED Driver
- LT1016CN8 Comparator
- $4.7 \mu \mathrm{H}$ Inductor
- Related literature

## HFBR-0400 SMA Evaluation Kit

Contains the following :

- One HFBR-1402 transmitter
- One HFBR-2402 five megabaud TTL receiver
- Two meters of SMA connectored $1000 \mu \mathrm{~m}$ plastic optical fiber
- Related literature

HFBR-0416 Evaluation Kit

Contains the following:

- One fully assembled 1 x 9 transceiver board for 155 MBd evaluation including:
-HFBR-1414 transmitter
-HFBR-2416 receiver
-circuitry
- Related literature

## HFBR-0463 Ethernet MAU

## Evaluation Kit

Contains the following:

- One fully assembled Media Attachment Unit (MAU) board which includes:
-HFBR-1414 transmitter
-HFBR-2416 receiver
-HFBR-4663 IC
- Related literature

Note: Cable not included. Order HFBR-BXS010 seperately (2 pieces)

## Package and Handling Information

Package Information
All HFBR-0400 Series transmitters and receivers are housed in a low-cost, dual-inline package that is made of high strength, heat resistant, chemically resistant, and UL 94V-O flame retardant ULTEM ${ }^{\circledR}$ (plastic (UL File \#E121562). The transmitters are easily identified by the light grey color connector port. The receivers are easily identified by the dark grey color connector port. (Black color for conductive port.) The package is designed for auto-insertion and wave soldering so it is ideal for high volume production applications.

## Handling and Design Information

Each part comes with a protective port cap or plug covering the optics. These caps/plugs will vary by port style. When soldering, it is advisable to leave the protective cap on the unit to keep the optics clean. Good system performance requires clean port optics and cable ferrules to avoid obstructing the optical path. Clean compressed air often is sufficient to remove particles of dirt; methanol on a cotton swab also works well.

## Recommended Chemicals for Cleaning/Degreasing HFBR-0400 Products <br> Alcohols: methyl, isopropyl, isobutyl. Aliphatics: hexane, heptane, Other: soap solution, naphtha.

Do not use partially halogenated hydrocarbons such as $1,1.1$ trichloroethane, ketones such as MEK, acetone, chloroform, ethyl acetate, methylene dichloride, phenol, methylene chloride, or N-methylpyrolldone. Also, Agilent does not recommend the use of cleaners that use halogenated hydrocarbons because of their potential environmental harm.

## Panel Mount Hardware

HFBR-4401: for SMA Ports

WASHER

HFBR-4411: for ST Ports

(Each HFBR-4401 and HFBR-4411 kit consists of 100 nuts and 100 washers.)

## Port Cap Hardware

HFBR-4402: 500 SMA Port Caps
HFBR-4120: 500 ST Port Plugs (120 psi)
HFBR-4412: 500 FC Port Caps
HFBR-4417: 500 SC Port Plugs

## Options

In addition to the various port styles available for the HFBR0400 series products, there are also several extra options that can be ordered. To order an option, simply place the corresponding option number at the end of the part number. For instance, a metal-port option SMA receiver would be HFBR-2406M. You can add any number of options in series at the end of a part number. Please contact your local sales office for further information or browse Agilent's fiber optics home page at http:// www.agilent.com/go/fiber

## Option T (Threaded Port Option)

- Allows ST style port components to be panel mounted.
- Compatible with all current makes of ST multimode connectors
- Mechanical dimensions are compliant with MIL-STD83522/13
- Maximum wall thickness when using nuts and washers from the HFBR-4411 hardware kit is 2.8 mm (0.11 inch)
- Available on all ST ports

## Option C (Conductive Port Receiver Option)

- Designed to withstand electrostatic discharge (ESD) of 25 kV to the port
- Significantly reduces effect of electromagnetic interference (EMI) on receiver sensitivity
- Allows designer to separate the signal and conductive port grounds
- Recommended for use in noisy environments
- Available on SMA and threaded ST port style receivers only

## Option M (Metal Port Option)

- Nickel plated aluminum connector receptacle
- Designed to withstand electrostatic discharge (ESD) of 15 kV to the port
- Significantly reduces effect of electromagnetic interference (EMI) on receiver sensitivity
- Allows designer to separate the signal and metal port grounds
- Recommended for use in very noisy environments
- Available on SMA, FC, ST, and threaded ST ports

## Option K (Kinked Lead Option)

- Grounded outside 4 leads are "kinked"
- Allows components to stay anchored in the PCB during wave solder and aqueous wash processes

Options TA, TB, HA, HB (Active Device Mount Options)
(These options are unrelated to the threaded port option T.)

- All metal, panel mountable package with a 3 or 4 pin receptacle end
- Available for HFBR-14X4, 24X2 and 24X6 components
- Choose from diamond or square pinout, straight or bent leads ADM Picture

$$
\text { - } \mathrm{TA}=\underset{\text { leads }}{\text { Square pinout/straight }}
$$

$\mathrm{TB}=$ Square pinout/bent leads
$\mathrm{HA}=$ Diamond pinout/straight leads
$\mathrm{HB}=$ Diamond pinout/bent leads

## Duplex Option

In addition to the standard options, some HFBR-0400 series products come in a duplex configuration with the transmitter on the left and the receiver on the right. This option was designed for ergonomic and efficient manufacturing. The following part numbers are available in the duplex option:
HFBR-5414 (Duplex ST)
HFBR-5414T (Duplex Threaded ST)
HFBR-54E4 (Duplex SC)

## Typical Link Data

## HFBR-0400 Series

## Description

The following technical data is taken from 4 popular links using the HFBR-0400 series: the 5 MBd link, Ethernet 20 MBd link, Token Ring 32 MBd link, and the 155 MBd link. The data given
corresponds to transceiver solutions combining the HFBR-0400 series components and various recommended transceiver design circuits using off-the-shelf electrical components. This data is meant to be regarded as an
example of typical link performance for a given design and does not call out any link limitations. Please refer to the appropriate application note given for each link to obtain more information.

## 5 MBd Link (HFBR-14XX/24X2)

Link Performance $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$ unless otherwise specified

| Parameter | Symbol | Min. | Typ. | Max. | Units | Conditions | Reference |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Optical Power Budget with 50/125 $\mu \mathrm{m}$ fiber | $\mathrm{OPB}_{50}$ | 4.2 | 9.6 |  | dB | $\begin{aligned} & \text { HFBR-14X4/24X2 } \\ & \text { NA }=0.2 \end{aligned}$ | Note 1 |
| Optical Power Budget with 62.5/125 $\mu \mathrm{m}$ fiber | $\mathrm{OPB}_{62.5}$ | 8.0 | 15 |  | dB | $\begin{aligned} & \text { HFBR-14X4/24X2 } \\ & \text { NA }=0.27 \end{aligned}$ | Note 1 |
| Optical Power Budget with 100/140 $\mu \mathrm{m}$ fiber | $\mathrm{OPB}_{100}$ | 8.0 | 15 |  | dB | $\begin{aligned} & \text { HFBR-14X2/24X2 } \\ & \text { NA }=0.30 \end{aligned}$ | Note 1 |
| Optical Power Budget with $200 \mu \mathrm{~m}$ fiber | $\mathrm{OPB}_{200}$ | 12 | 20 |  | dB | $\begin{aligned} & \text { HFBR-14X2/24X2 } \\ & \text { NA }=0.37 \end{aligned}$ | Note 1 |
| Date Rate Synchronous |  | dc |  | 5 | MBd |  | Note 2 |
| Asynchronous |  | dc |  | 2.5 | MBd |  | Note 3, Fig. 7 |

| Propagation Delay HIGH to LOW | tPHL |  | 46 |  | ns |  |  |
| System Pulse Width Distortion | $\mathrm{tPLH}^{\text {- }}$ PHL |  | 26 |  | ns | Fiber cable length $=1 \mathrm{~m}$ |  |
| Bit Error Rate | BER |  |  | $10^{-9}$ |  | Data Rate $<5 \mathrm{Bd}$ $\mathrm{P}_{\mathrm{R}}>-24 \mathrm{dBm}$ Peak |  |

## Notes:

1. OPB at $\mathrm{T}_{\mathrm{A}}=-40$ to $85^{\circ} \mathrm{C}, \mathrm{V}_{\mathrm{CC}}=5.0 \mathrm{~V} \mathrm{dc}, \mathrm{I}_{\mathrm{F} \text { ON }}=60 \mathrm{~mA} . \mathrm{P}_{\mathrm{R}}=-24 \mathrm{dBm}$ peak.
2. Synchronous data rate limit is based on these assumptions: a) $50 \%$ duty factor modulation, e.g., Manchester I or BiPhase Manchester II; b) continuous data; c) PLL Phase Lock Loop demodulation; d) TTL threshold.
3. Asynchronous data rate limit is based on these assumptions: a) NRZ data; b) arbitrary timing-no duty factor restriction; c) TTL threshold.

## 5 MBd Logic Link Design

If resistor $\mathrm{R}_{1}$ in Figure 2 is $70.4 \Omega$, a forward current $\mathrm{IF}_{\mathrm{F}}$ of 48 mA is applied to the HFBR14 X 4 LED transmitter. With $\mathrm{I}_{\mathrm{F}}=$ 48 mA the HFBR-14X4/24X2 logic link is guaranteed to work with $62.5 / 125 \mu \mathrm{~m}$ fiber optic cable over the entire range of 0 to 1750 meters at a data rate of dc to 5 MBd , with arbitrary data format and pulse width distortion typically less than $25 \%$. By setting $R_{1}=115 \Omega$, the transmitter can be driven with $\mathrm{I}_{\mathrm{F}}=30 \mathrm{~mA}$, if it is desired to economize on power or achieve lower pulse distortion.

The following example will illustrate the technique for selecting the appropriate value of $I_{F}$ and $R_{1}$.

Maximum distance required $=400$ meters. From Figure 3 the drive current should be 15 mA . From the transmitter data $\mathrm{V}_{\mathrm{F}}=1.5 \mathrm{~V}$ (max.) at $\mathrm{I}_{\mathrm{F}}=15 \mathrm{~mA}$ as shown in Figure 9.
$\mathrm{R}_{1}=\frac{\mathrm{V}_{\mathrm{CC}}-\mathrm{V}_{\mathrm{F}}}{\mathrm{I}_{\mathrm{F}}}=\frac{5 \mathrm{~V}-1.5 \mathrm{~V}}{15 \mathrm{~mA}}$
$\mathrm{R}_{1}=233 \Omega$

The curves in Figures 3, 4, and 5 are constructed assuming no inline splice or any additional system loss. Should the link consists of any in-line splices, these curves can still be used to calculate link limits provided they are shifted by the additional system loss expressed in dB. For example, Figure 3 indicates that with 48 mA of transmitter drive current, a 1.75 km link distance is achievable with $62.5 / 125 \mu \mathrm{~m}$ fiber which has a maximum attenuation of $4 \mathrm{~dB} / \mathrm{km}$. With 2 dB of additional system loss, a 1.25 km link distance is still achievable.

## Notes:

1. Typical data at $\mathrm{T}_{\mathrm{A}}=25^{\circ} \mathrm{C}, \mathrm{V}_{\mathrm{CC}}=5.0 \mathrm{~V}$ dc, PECL serial interface.
2. Typical OPB was determined at a probability of error (BER) of $10^{-9}$. Lower probabilities of error can be achieved with short fibers that have less optical loss.

HFBR-14X2/14X4 LowCost High-Speed Transmitters

## Description

The HFBR-14XX fiber optic transmitter contains an 820 nm AlGaAs emitter capable of efficiently launching optical power into four different optical fiber sizes: $50 / 125 \mu \mathrm{~m}, 62.5 / 125$ $\mu \mathrm{m}, 100 / 140 \mu \mathrm{~m}$, and $200 \mu \mathrm{~m}$ HCS ${ }^{\circledR}$. This allows the designer flexibility in choosing the fiber size. The HFBR-14XX is designed to operate with the Agilent HFBR-24XX fiber optic receivers.

The HFBR-14XX transmitter's high coupling efficiency allows the emitter to be driven at low current levels resulting in low power consumption and increased reliability of the transmitter. The HFBR-14X4 high power transmitter is optimized for small size fiber and typically can launch

- 15.8 dBm optical power at 60 mA into $50 / 125 \mu \mathrm{~m}$ fiber and -12 dBm into $62.5 / 125 \mu \mathrm{~m}$ fiber. The HFBR-14X2 standard transmitter typically can launch -12 dBm of optical power at 60 mA into $100 / 140 \mu \mathrm{~m}$ fiber cable. It is ideal for large size fiber such as $100 / 140 \mu \mathrm{~m}$. The high launched optical power level is useful for systems where star couplers, taps, or inline connectors create large fixed losses.

Consistent coupling efficiency is assured by the double-lens optical system (Figure 1). Power coupled into any of the three fiber types varies less than 5 dB from part to part at a given drive current and temperature. Consistent coupling efficiency reduces receiver dynamic range requirements which allows for longer link lengths.

| Rise Time, Fall Time <br> $(10 \%$ to $90 \%)$ | $\mathrm{t}_{\mathrm{r}}, \mathrm{t}_{\mathrm{f}}$ |  | 3.0 |  | nsec | $\mathrm{I}_{\mathrm{F}}=10$ to <br> 100 mA | Note 7, <br> Figure 11 |
| Pulse Width Distortion | PWD |  | 0.5 |  | nsec |  | Figure 11 |

## Notes:

1. For $\mathrm{I}_{\mathrm{FPK}}>100 \mathrm{~mA}$, the time duration should not exceed 2 ns .
2. Typical data at $\mathrm{T}_{\mathrm{A}}=25^{\circ} \mathrm{C}$.
3. Thermal resistance is measured with the transmitter coupled to a connector assembly and mounted on a printed circuit board.
4. D is measured at the plane of the fiber face and defines a diameter where the optical power density is within 10 dB of the maximum.
5. $\mathrm{P}_{\mathrm{T}}$ is measured with a large area detector at the end of 1 meter of mode stripped cable, with an $\mathrm{ST}^{\circledR}$ precision ceramic ferrule (MIL-STD-83522/13) for HFBR-1412/1414, and with an SMA 905 precision ceramic ferrule for HFBR-1402/1404.
6. When changing $\mu \mathrm{W}$ to dBm , the optical power is referenced to $1 \mathrm{~mW}(1000 \mu \mathrm{~W})$. Optical Power $\mathrm{P}(\mathrm{dBm})=10 \log \mathrm{P}(\mu \mathrm{W}) / 1000 \mu \mathrm{~W}$.
7. Pre-bias is recommended if signal rate $>10 \mathrm{MBd}$, see recommended drive circuit in Figure 11.
8. Pins 2, 6 and 7 are welded to the anode header connection to minimize the thermal resistance from junction to ambient. To further reduce the thermal resistance, the anode trace should be made as large as is consistent with good RF circuit design.
9. Fiber NA is measured at the end of 2 meters of mode stripped fiber, using the far-field pattern. NA is defined as the sine of the half angle, determined at $5 \%$ of the peak intensity point. When using other manufacturer's fiber cable, results will vary due to differing NA values and specification methods.

All HFBR-14XX LED transmitters are classified as IEC 825-1 Accessible Emission Limit (AEL) Class 1 based upon the current proposed draft scheduled to go in to effect on January 1, 1997. AEL Class 1 LED devices are considered eye safe. Contact your Agilent sales representative for more information.

> CAUTION: The small junction sizes inherent to the design of these components increase the components' susceptibility to damage from electrostatic discharge (ESD). It is advised that normal static precautions be taken in handling and assembly of these components to prevent damage and/or degradation which may be induced by ESD.

## Recommended Drive Circuits

The circuit used to supply current to the LED transmitter can significantly influence the optical switching characteristics of the LED. The optical rise/fall times and propagation delays can be improved by using the appropriate circuit techniques. The LED drive circuit shown in

Figure 11 uses frequency compensation to reduce the typical rise/fall times of the LED and a small pre-bias voltage to minimize propagation delay differences that cause pulse-width distortion. The circuit will typically produce rise/fall times of 3 ns , and a total jitter including pulse-width distortion of less than 1 ns . This circuit is recommended for applications requiring low edge jitter
or high-speed data transmission at signal rates of up to 155 MBd . Component values for this circuit can be calculated for different LED drive currents using the equations shown below. For additional details about LED drive circuits, the reader is encouraged to read Agilent Application Bulletin 78 and Application Note 1038.

## HFBR-24X2 Low-Cost 5 MBd Receiver Description

The HFBR-24X2 fiber optic receiver is designed to operate with the Hewlett-Packard HFBR14XX fiber optic transmitter and $50 / 125 \mu \mathrm{~m}, 62.5 / 125 \mu \mathrm{~m}, 100 /$ $140 \mu \mathrm{~m}$, and $200 \mu \mathrm{~m} \mathrm{HCS}^{\circledR}$ fiber optic cable. Consistent coupling into the receiver is assured by the lensed optical system (Figure 1). Response does not vary with fiber size $\leq 0.100 \mu \mathrm{~m}$.

The HFBR-24X2 receiver incorporates an integrated photo IC containing a photodetector and dc amplifier driving an opencollector Schottky output transistor. The HFBR-24X2 is
designed for direct interfacing to popular logic families. The absence of an internal pull-up resistor allows the open-collector output to be used with logic families such as CMOS requiring voltage excursions much higher than $V_{C C}$.

Both the open-collector "Data" output Pin 6 and $V_{\text {CC }}$ Pin 2 are referenced to "Com" Pin 3, 7. The "Data" output allows busing, strobing and wired "OR" circuit configurations. The transmitter is designed to operate from a single +5 V supply. It is essential that a bypass capacitor ( $0.1 \mu \mathrm{~F}$ ceramic) be connected from Pin $2\left(\mathrm{~V}_{\mathrm{CC}}\right)$ to Pin 3 (circuit common) of the receiver.

## Notes:

1. 2.0 mm from where leads enter case.
2. 8 mA load ( $5 \times 1.6 \mathrm{~mA}$ ), $\mathrm{R}_{\mathrm{L}}=560 \Omega$.
3. Typical data at $\mathrm{T}_{\mathrm{A}}=25^{\circ} \mathrm{C}, \mathrm{V}_{\mathrm{CC}}=5.0 \mathrm{Vdc}$.
4. D is the effective diameter of the detector image on the plane of the fiber face. The numerical value is the product of the actual detector diameter and the lens magnification.
5. Measured at the end of $100 / 140 \mu \mathrm{~m}$ fiber optic cable with large area detector.
6. Propagation delay through the system is the result of several sequentially-occurring phenomena. Consequently it is a combination of data-rate-limiting effects and of transmission-time effects. Because of this, the data-rate limit of the system must be described in terms of time differentials between delays imposed on falling and rising edges.
7. As the cable length is increased, the propagation delays increase at 5 ns per meter of length. Data rate, as limited by pulse width distortion, is not affected by increasing cable length if the optical power level at the receiver is maintained.
[^3]
## HFBR-24X6 Low-Cost 125 MHz Receiver Description

The HFBR-24X6 fiber optic receiver is designed to operate with the Agilent HFBR-14XX fiber optic transmitters and 50/ $125 \mu \mathrm{~m}, 62.5 / 125 \mu \mathrm{~m}, 100 / 140$ $\mu \mathrm{m}$ and $200 \mu \mathrm{~m} \mathrm{HCS}^{\circledR}$ fiber optic cable. Consistent coupling into the receiver is assured by the lensed optical system (Figure 1). Response does not vary with fiber size for core diameters of $100 \mu \mathrm{~m}$ or less.

The receiver output is an analog signal which allows follow-on circuitry to be optimized for a variety of distance/data rate requirements. Low-cost external components can be used to convert the analog output to logic compatible signal levels for various data formats and data rates up to 175 MBd. This distance/data rate tradeoff results in increased optical power budget at lower data rates which can be used for additional distance or splices.

The HFBR-24X6 receiver contains a PIN photodiode and low noise transimpedance pre-amplifier
integrated circuit. The HFBR-24X6 receives an optical signal and converts it to an analog voltage. The output is a buffered emitterfollower. Because the signal amplitude from the HFBR-24X6 receiver is much larger than from a simple PIN photodiode, it is less susceptible to EMI, especially at high signaling rates. For very noisy environments, the conductive or metal port option is recommended. A receiver dynamic range of 23 dB over temperature is achievable (assuming $10^{-9} \mathrm{BER}$ ).

The frequency response is typically dc to 125 MHz . Although the HFBR-24X6 is an analog receiver, it is compatible with digital systems. Please refer to Application Bulletin 78 for simple and inexpensive circuits that operate at 155 MBd or higher.

The recommended ac coupled receiver circuit is shown in Figure 12. It is essential that a 10 ohm resistor be connected between pin 6 and the power supply, and a 0.1 $\mu \mathrm{F}$ ceramic bypass capacitor be connected between the power supply and ground. In addition, pin 6 should be filtered to protect the
receiver from noisy host systems. Refer to AN 1038, 1065, or AB 78 for details.

| Equivalent N.A. | NA |  | 0.35 |  |  |  |  |
| Equivalent Diameter | D |  | 324 |  | $\mu \mathrm{m}$ |  | Note 7 |

CAUTION: The small junction sizes inherent to the design of these components increase the components' susceptibility to damage from electrostatic discharge (ESD). It is advised that normal static precautions be taken in handling and assembly of these components to prevent damage and/or degradation which may be induced by ESD.

Dynamic Characteristics $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C} ; 4.75 \mathrm{~V} \leq$ Supply Voltage $\leq 5.25 \mathrm{~V} ; \mathrm{R}_{\mathrm{LOAD}}=511 \Omega, \mathrm{C}_{\mathrm{LOAD}}$ $=5 \mathrm{pF}$ unless otherwise specified

| Parameter | Symbol | Min. | Typ. ${ }^{2}$ ] | Max. | Units | Conditions | Reference |

## Notes:

1. 2.0 mm from where leads enter case.
2. Typical specifications are for operation at $\mathrm{T}_{\mathrm{A}}=25^{\circ} \mathrm{C}$ and $\mathrm{V}_{\mathrm{CC}}=+5 \mathrm{~V}$ dc.
3. For $200 \mu \mathrm{~m}$ HCS fibers, typical responsivity will be $6 \mathrm{mV} / \mu \mathrm{W}$. Other parameters will change as well.
4. Pin $\# 2$ should be ac coupled to a load $\geq 510$ ohm. Load capacitance must be less than 5 pF .
5. Measured with a 3 pole Bessel filter with a $75 \mathrm{MHz},-3 \mathrm{~dB}$ bandwidth. Recommended receiver filters for various bandwidths are provided in Application Bulletin 78.
6. Overdrive is defined at $\mathrm{PWD}=2.5 \mathrm{~ns}$.
7. D is the effective diameter of the detector image on the plane of the fiber face. The numerical value is the product of the actual detector diameter and the lens magnification.
8. Measured with a 10 ns pulse width, $50 \%$ duty cycle, at the $50 \%$ amplitude point of the waveform.
9. Percent overshoot is defined as:
$\left(\frac{\mathrm{V}_{\mathrm{PK}}-\mathrm{V}_{100 \%}}{\mathrm{~V}_{100 \%}}\right) \times 100 \%$
10. The conversion factor for the rise time to bandwidth is 0.41 since the HFBR-24X6 has a second order bandwidth limiting characteristic.

Figure 12. Recommended ac Coupled Receiver Circuit. (See AB 78 and AN 1038 for more information.)

CAUTION: The small junction sizes inherent to the design of these components increase the components' susceptibility to damage from electrostatic discharge (ESD). It is advised that normal static precautions be taken in handling and assembly of these components to prevent damage and/or degradation which may be induced by ESD.
